National Survey of Student Engagement

Shown below is a demonstration of how "Means" are calculated. The "Means" term refers to the weighted mean of responses, not the actual mean of the construct being measured. For example, for a slide that presents response data for *hours spent studying*, the mean term does not describe the average number of hours spent studying, but rather the weighted average of responses to that survey item. In the illustration below, Mean = 2.95. This indicates that the "average response" to this survey question was 2.95 (as opposed to suggesting that respondents studied 2.95 hours per week on average).

Hours Spent Studying (per week)

** This is a hypothetical illustration, and does not represent real data.*

NSSE 2009 – First-Year

Level of Academic Challenge

College: Ag Food Systems and Natural Resources

During the current school year, how much has your coursework emphasized synthesizing and organizing ideas, information, or experiences into new, more complex interpretations and relationships?

NSSE 2009 - Seniors
