SLEEP CYCLES

We all need sleep, but our needs vary depending on our age. Sleep and wake cycles are balanced and driven by our body’s biological clock, which is a natural body pattern. Rapid eye movement (REM) and non-REM are sleep levels, or cycles, during sleep. REM sleep is a lighter sleep and non-REM is a deep sleep. Aim for your age group’s recommended range of sleep.

TEST YOUR KNOWLEDGE

True or false:
T/F: Decreased sleep is associated with increased body weight.
T/F: Sleep affects hormones that can lead to an abnormal appetite.
T/F: Leptin is a hormone that helps you know when you are full. It also is reduced with insufficient sleep.

Answers: True, True, True

TALK WITH YOUR DOCTOR

Ask your doctor before taking sleep aids, such as chamomile, melatonin or Valerian extract. Medications that you are taking could also cause side effects that disrupt sleep.

LAVENDER

Extracted oils from the lavender plant can be used in aromatherapy, in which the scent is inhaled. When combined with sleep hygiene practices, it has shown promising results for promoting sleep. However, be aware that some people are allergic to lavender.

EXERCISE AND MANAGE STRESS

Try to fit exercise into your schedule to help you see better sleep results. Consistent exercisers experience the best quality and quantity of sleep. Start with moving around more throughout the day, such as going for a walk on your lunch break. Incorporating more structured exercise into your lifestyle can benefit sleep and overall health.

Exercise helps you manage stress. Stress from work, travel or a busy family schedule can lead to sleep disturbances.
Can Certain Foods Promote Better Sleep?

Research is going strong on the topic of sleep and mixed results have been reported. Therefore, think of these as suggestions:

- Tryptophan, a protein building block found in many foods (for example, turkey and milk), helps your body produce a hormone, melatonin, which aids in falling asleep.
- Lacking in B vitamins can make producing melatonin naturally difficult for your body. Foods rich in B vitamins include fortified grain foods and milk. How about a bowl of fortified cereal and milk as a bedtime snack?
- “Sleep tea” has become popular, yet research has yet to completely back up its impact on sleep quality.
- Consuming a dinner or evening meal containing higher fiber and protein with less saturated fat can improve sleep results.

5 Things to Do

- Practice sleep hygiene tips.
- Consume a balanced, healthful diet.
- Limit caffeine, alcohol, cigarette smoking and media/technology before bedtime.
- Maintain a healthy weight.
- Incorporate physical activity into your daily routine.

Test Your Knowledge

Circle the items that may benefit sleep:

- Fiber-rich meal
- Kiwi
- Alcohol
- Lavender
- Exercise
- Vitamin C
- Television
- Caffeine
- Travel
- Turkey
- Healthy weight

TIP 1: Keep your phone out of the bedroom at night. Leave it in the kitchen or living area to avoid unnecessary interruptions such as notifications, calendar reminders and phone calls that could wait until morning.

TIP 2: Too much sleep and not enough sleep can be hard on your body. Aim for your age recommendation range.

TIP 3: Practice a routine of going to bed about the same time every night and waking up about the same time every morning.

Challenge: Do this even on the weekends!

TIP 4: Caffeine can be hidden in foods you might never suspect to have caffeine. It is in chocolate, tea leaves, kola nuts and sodas. Try limiting your caffeine a few milligrams at a time to improved sleep.
