

Limeburst® Littleleaf Linden

Tilia cordata 'LimeDak' (Family: *Malvaceae*)

Description: Golden lime foliage selection of littleleaf linden. The new foliage emerges golden in the spring and fades into a darker lime-green over the summer. Excellent change from the standard 'Greenspire' dark green foliage.

Hardiness: USDA hardiness zones 4 to 6(7)

Mature Size: Height: 20 to 25', Spread: 12 to 15'

Form (Shape): Pyramidal-Rounded

Growth Rate: Medium, a bit slower than the average littleleaf because of the reduced amount of chlorophyll in the leaves.

Foliage:

Spring/Summer: Golden yellow fading to darker lime-green

Autumn: Yellow

Texture: Medium

Flower: Yellowish and fragrant.

Fruit: Small nutlet, not ornamental.

Special Features: Golden lime-green foliage during growing season.

Light Preferences: Full sun exposure.

Soil Preferences: Adaptable but prefers a well-drained fertile soil, tolerates higher pH levels.

Propagation: Grafted

Ornamental Attributes: This unique littleleaf linden has outstanding golden foliage during the growing season adding diverse color to the landscape or boulevard.

Landscape Attributes: Littleleaf linden is extremely pollution tolerant and a widely adaptable tree.

Availability: Pending
