Subject: RE: CULE recommendations

Good Morning, Kent,

Thank you very much for your thoughtful and articulate message. I think everyone on CULE shares your concern that we must provide more meaningful and engaging science education for our non-science students. What is the best way for us to ensure that they will experience their science classes as an engaging adventure, rather than an obstacle course to be endured? I think Scott Wood is trying to promote this, but it needs to be on a larger scale than we have at the moment in UNIV 150.

lp
