

Facility Description:

The Biostatistics Core Facility exists to provide integrated information analytics services to scientists working in the physical, chemical, biological, or clinical sciences.

- We assist bench scientists with their data generation and analysis from conceptualization to implementation and publication.
- We are versed in a wide array of statistics and data analysis techniques, as they are used in a variety of academic fields. The Biostatistics Core Facility staff can tailor data analyses to the unique needs of the journals in your field of research.
- Where appropriate, the Biostatistics Core Facility staff will endeavor to develop new statistical methods to address the unique needs of your research laboratory.

Selected Areas of Expertise:

- Univariate and Multivariate Analysis
- Experimental Design Theory
- Bayesian Analysis
- Nonparametric Analysis
- Change Point Detection
- Asymptotic Theory
- Health Outcomes Research
- Efficiency and Productivity Analysis

For more information, or to discuss your data analysis needs, please select the following link and complete this brief form:
