How to view data on Binder

1. Once you click the link from NDSU PCPE, you should start out seeing this screen. If the repository has not been loaded recently, it may take 1 to 2 minutes to load.

![Repository loading screen](image)

2. Select Data App

![Data App screenshot](image)

3. Once the notebook has finished loading, click Voila.
4. Then, the app will begin loading. This step shouldn’t take long.

5. Once the app is loaded, you can select which date, column of data, and state you would like to view. The current view shows the difference between the current unemployment rate and the rate in Feb 2020.
6. If you scroll down, you can view a table with data for the selected state or states. Data will reflect the column selected.
