

Who is Galois?

“Galois specializes in the research and development of new technologies that solve the most difficult problems in computer science”

What was the project?

- Display a graph representation of a network
- Show which nodes can access which domain level
- Suggest nodes to be trusted to work across levels

What was our solution?

- Upload XML file containing network
- Graph the network & identify which nodes have access across domains
- Different colors to indicate separate domain level & failures (nodes with access to multiple levels)

Graph output showing different domain levels
