

## Business Need

Scheels' stores provide sales floor coverage based on expected customer traffic, assigning employees to specific needed areas. Currently, Scheels does not have a system in place to be able to record and track that floor coverage data in real time. Being able to find holes in the floor will ensure that Scheel's customer receive the best experience that Scheels can offer.

## Development Phase 1

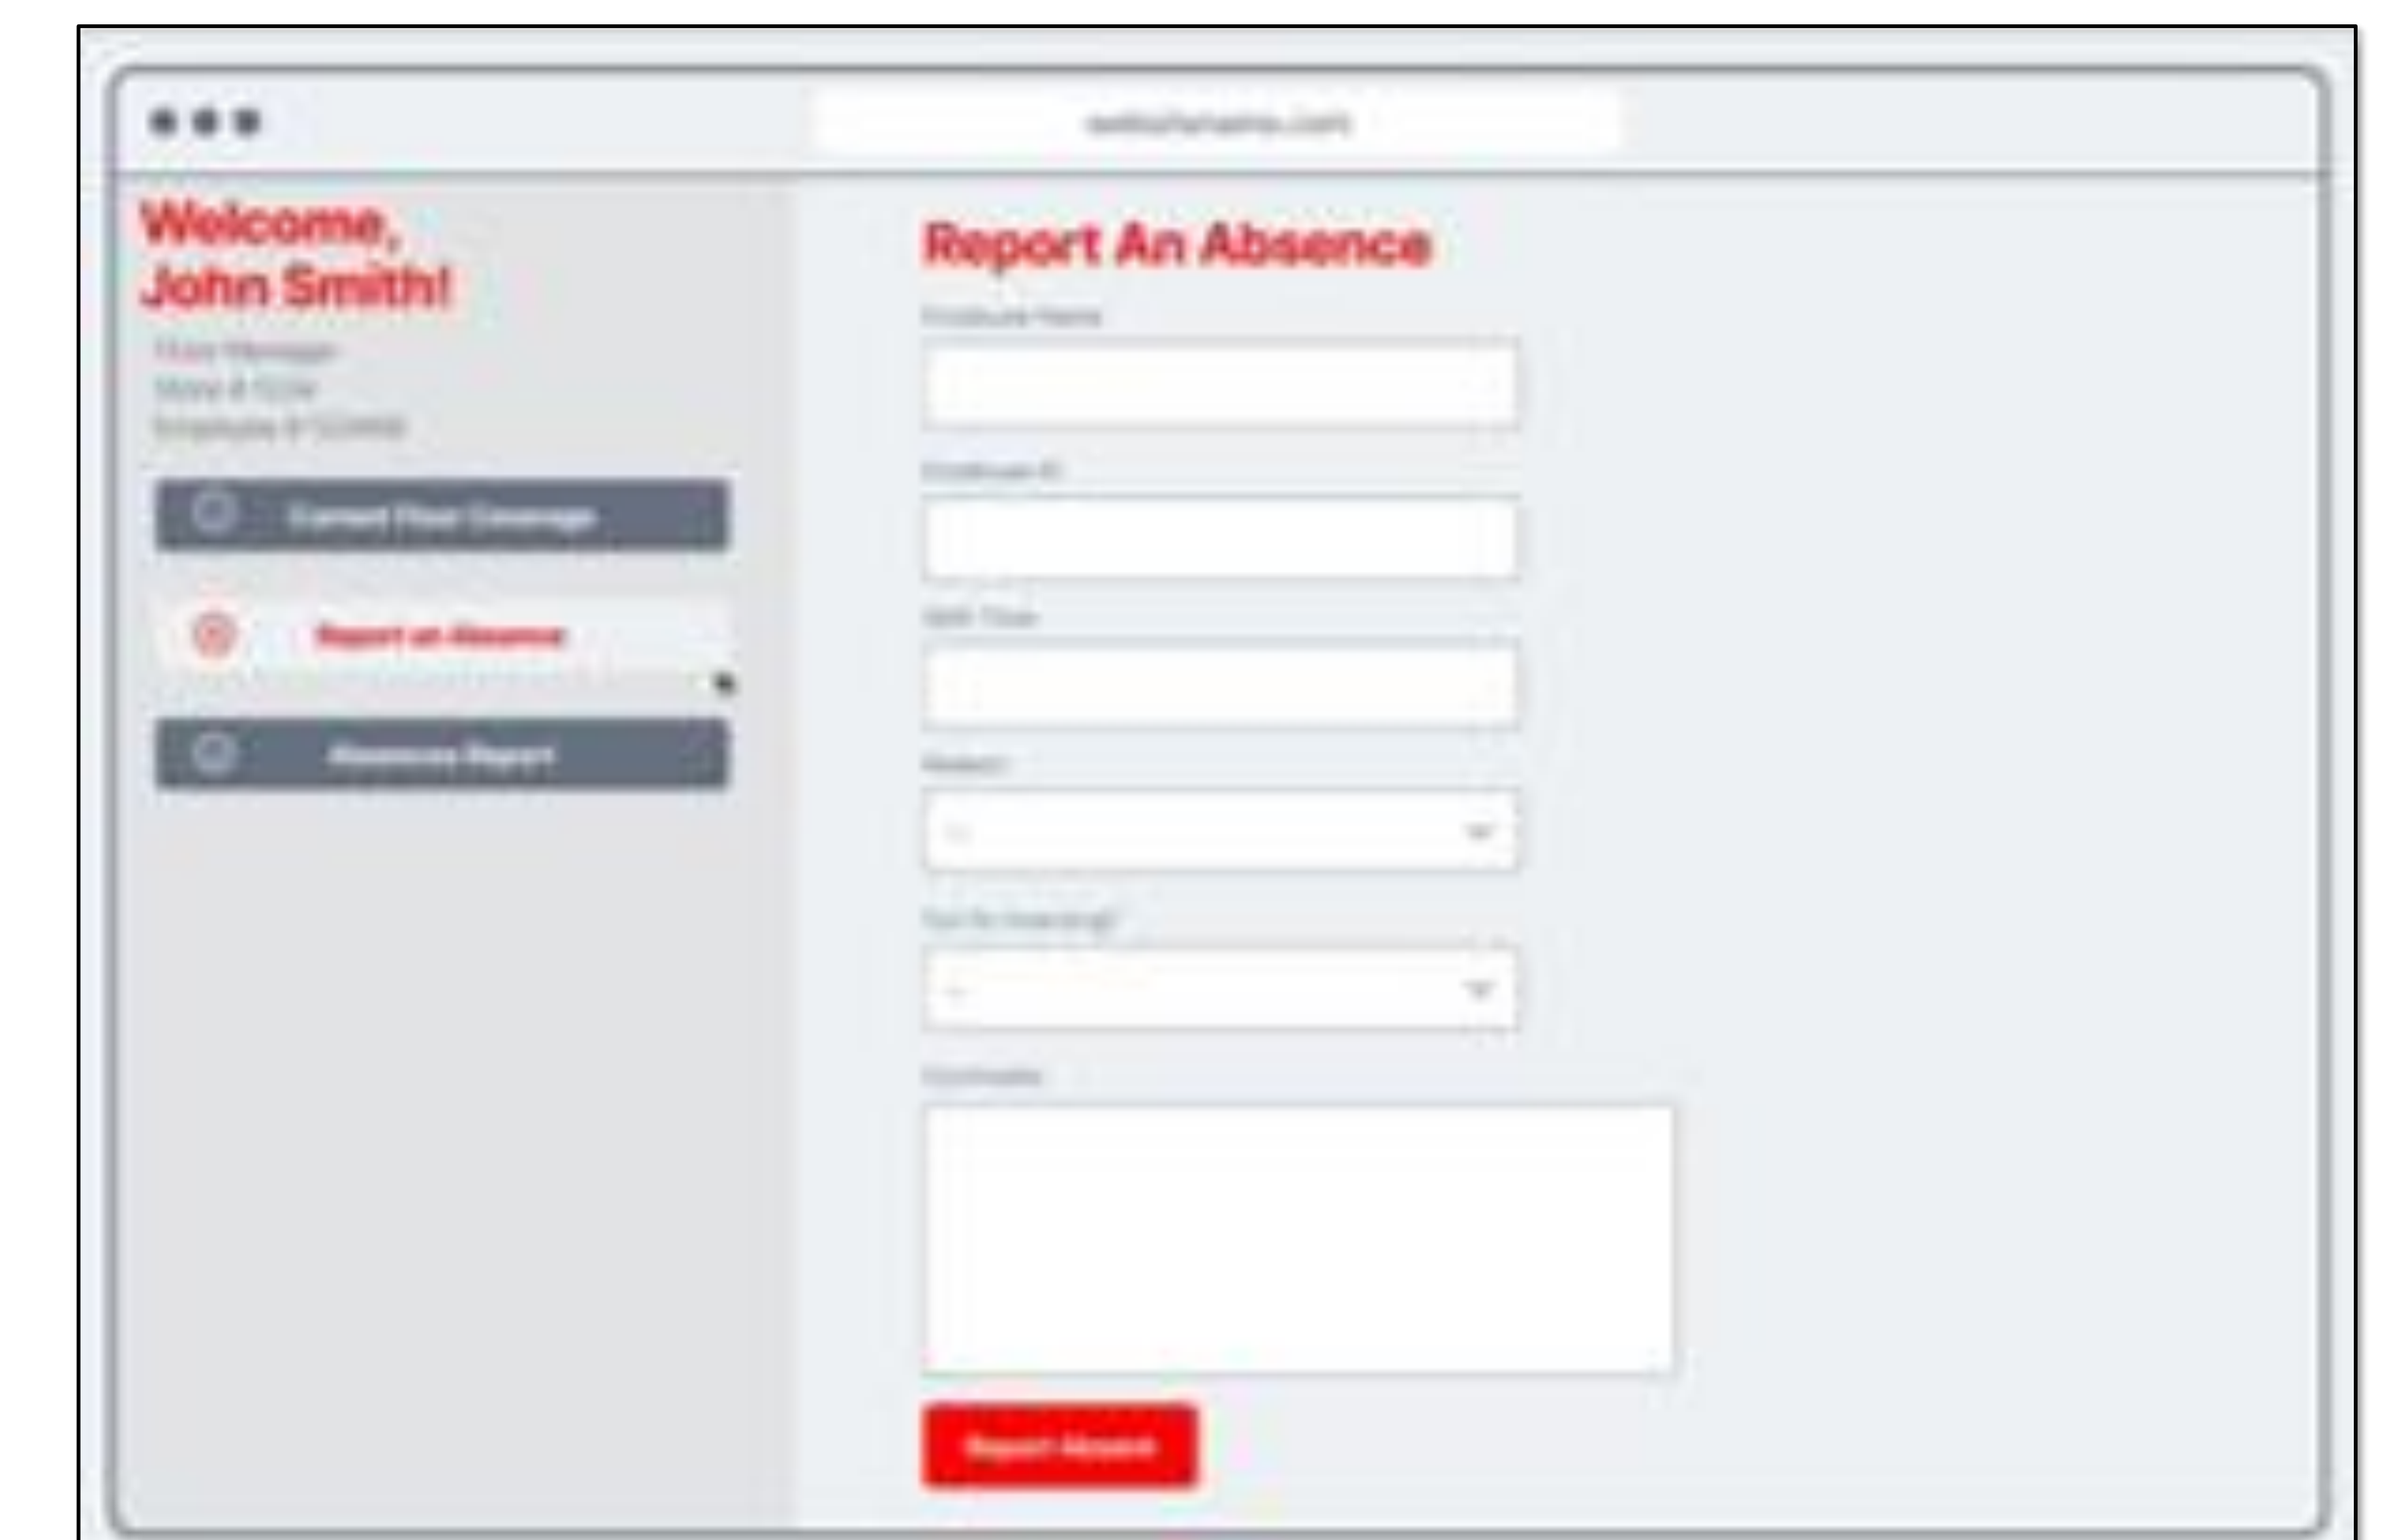

- UML Diagram Created
- Database Creation
- API Creation
- Database and API Connection

UML Diagram

## Development Phase 2

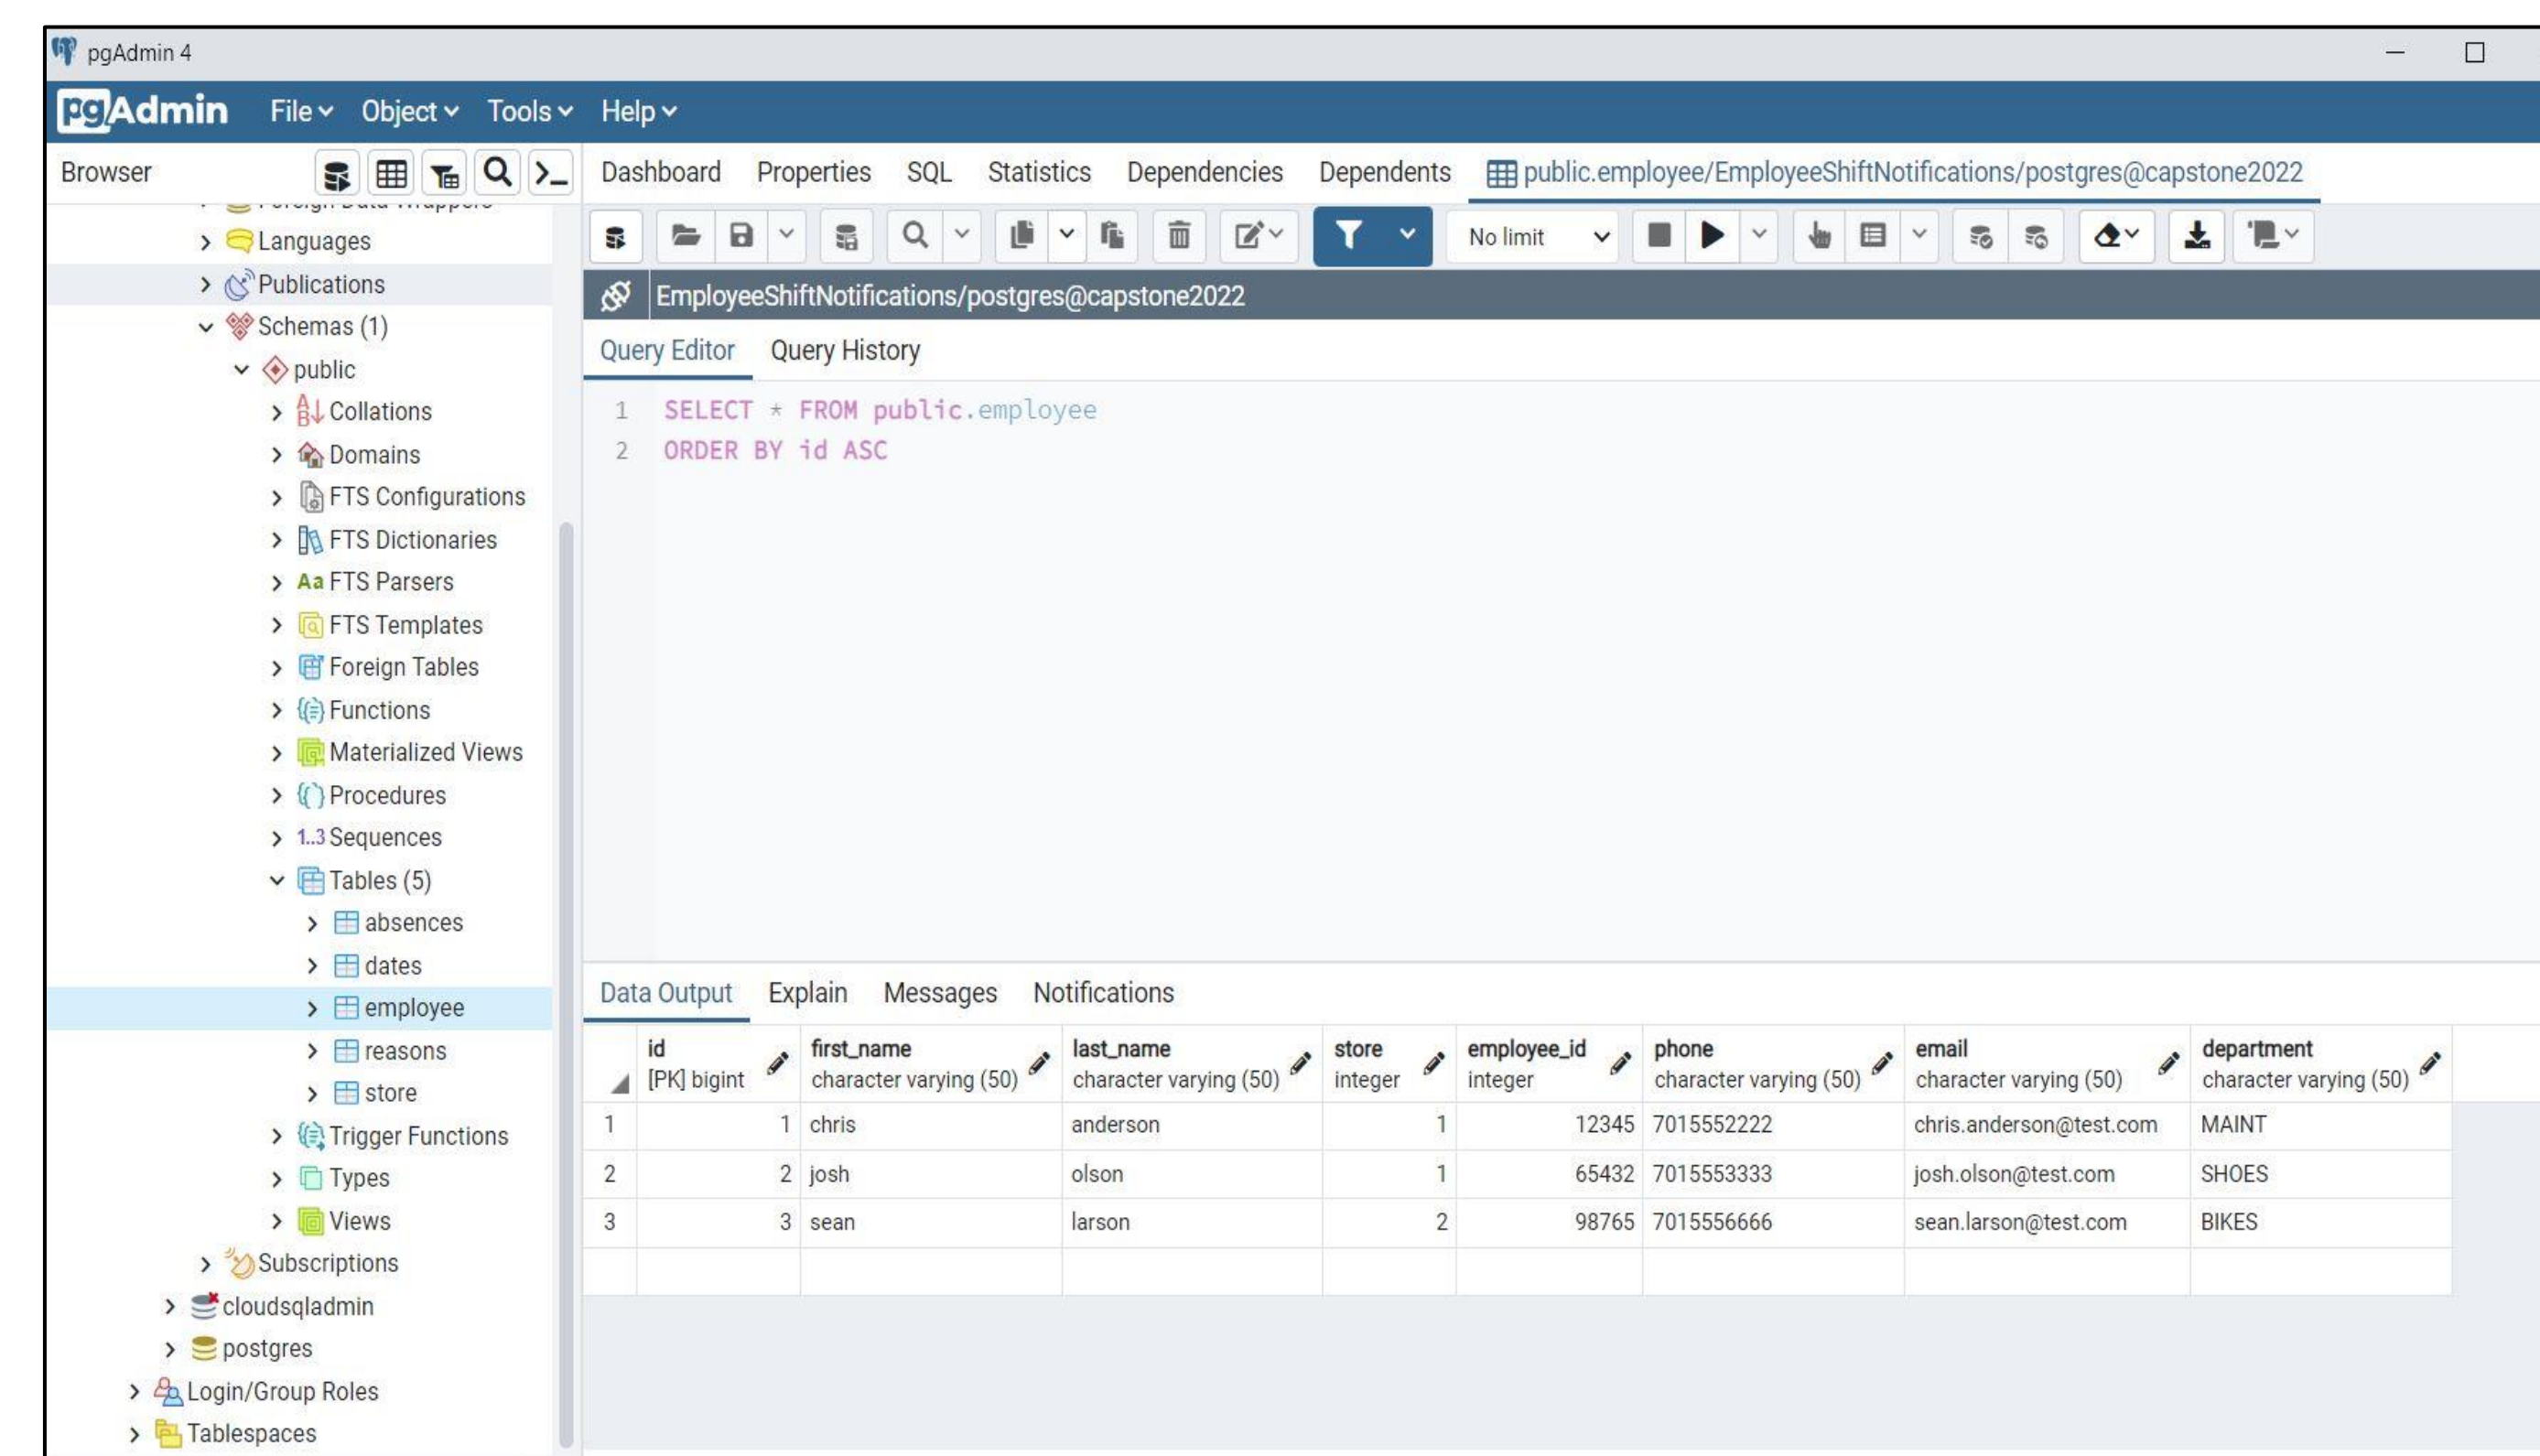

- Wireframe Creation
- Webpages Creation
- Website API and Database Connection
- Final Client Review

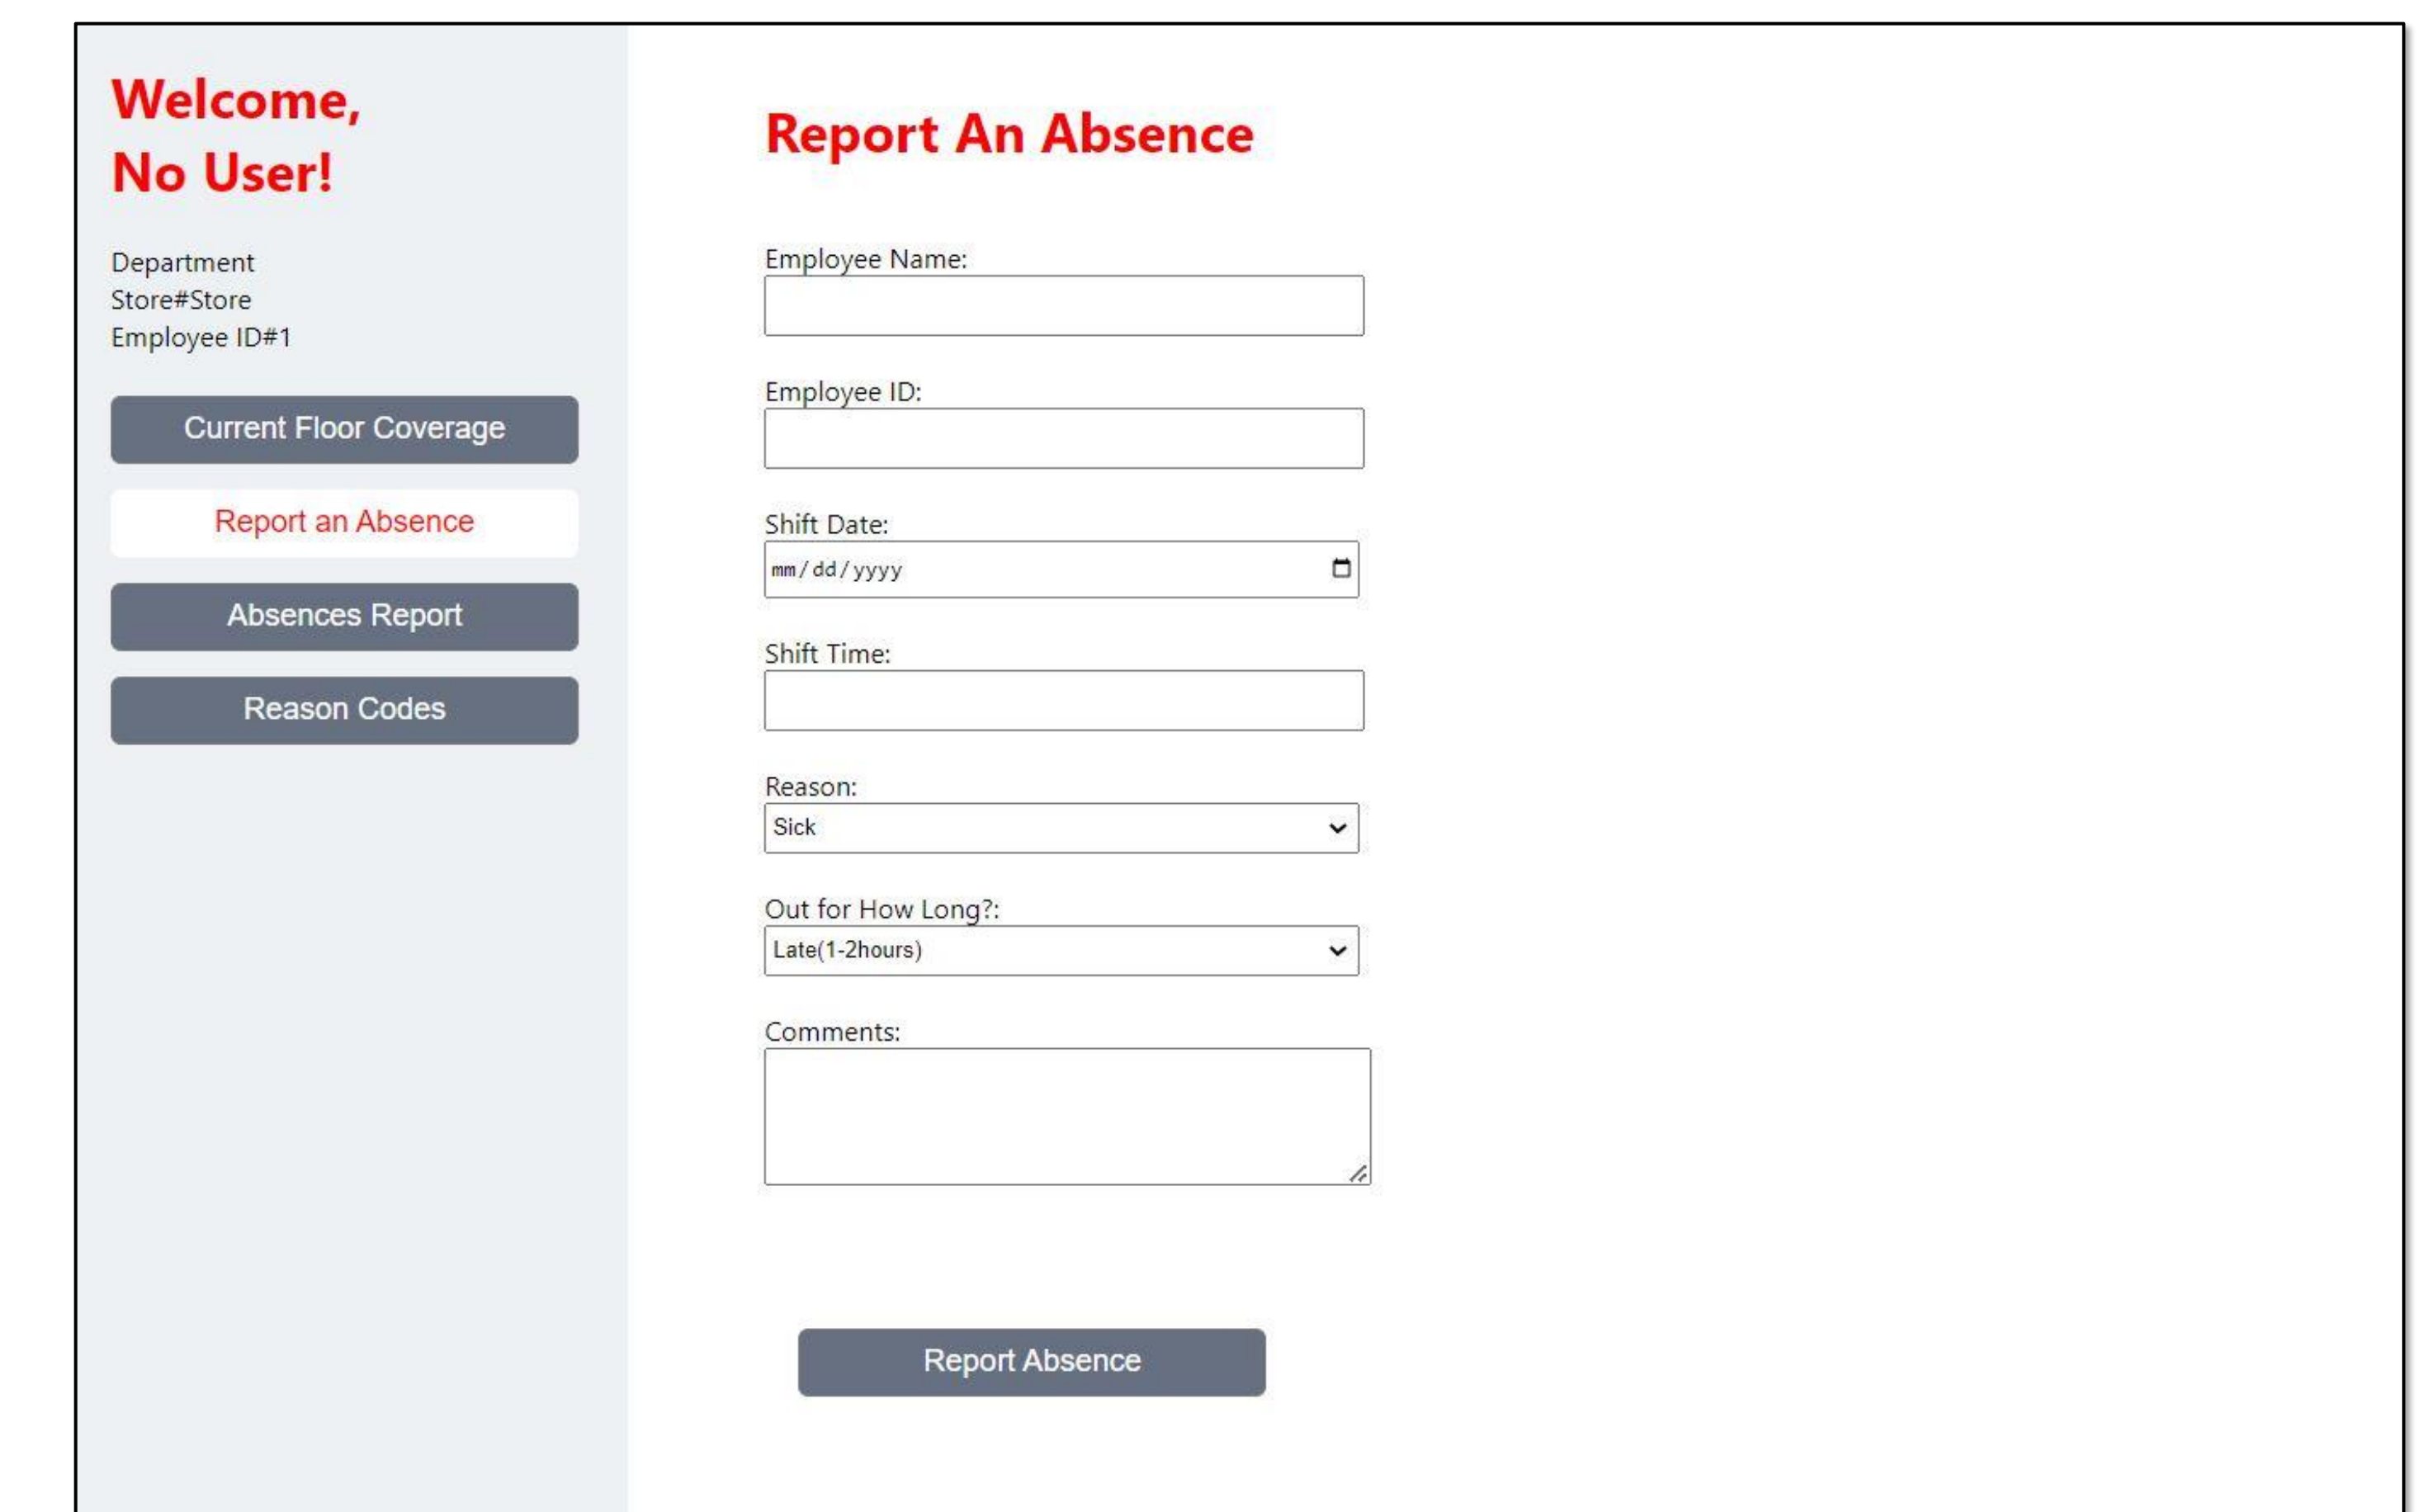

Wireframe Example

## Intended Solution

In this project, we aimed to develop a database and an API that would lead to creating a fully designed and functioning website.

Database in Progress
