Livescribe Smartpen User Guide

About Your Livescribe Smartpen

The Livescribe smartpen is an advanced paper-based computer in the form of a pen that can capture everything you hear and write.

About Paper Replay

When you start your smartpen, it is ready to capture anything you write on Livescribe Dot Paper.

Writing, Recording, and Playback Basics

Your smartpen has many features and uses. One of the main uses is capturing notes you write and recording audio.

Using Smartpen Apps

Smartpen apps are small programs that run on your smartpen. There are two basic kinds of smartpen apps: System and Store.

Recording Audio on a Smartpen

Recording audio as you write notes is a key feature of your Livescribe smartpen. You can also record audio without writing notes.

Playing Back Audio on a Smartpen

After recording audio with your smartpen, you can play it back in several ways.

Sending and Sharing Notes and Audio from a Smartpen

Using Livescribe Connect, you can send and optionally share notes and audio directly from your smartpen when you dock it to your computer. See the Livescribe Connect User Guide.

Doing Math Calculations

You can use your smartpen to perform math calculations.

Using the Piano

With Piano, you can draw a piano on your dotted paper and play music with the smartpen. You can change the sound of your piano, add rhythm tracks, and add sharp and flat notes.

Using the Translator Demo

With the Translator Demo, you can translate a small set of words and the numbers zero to nine from English into Spanish, Swedish, Arabic, or Mandarin. By writing a word in English in your notebook, you can see and hear correct translation from the smartpen.

Getting More Apps

Using the Settings Menu

With the Settings menu, you can change and view many smartpen settings.

Setting the Date and Time

You can set the date and time on your smartpen.

Configuring the Smartpen Screen

There are several settings you can apply to your smartpen screen.
