Avenues of SCIENTIFIC DISCOVERY

Using innovative research conducted at North Dakota State University to promote interactive science experiences with area high-school students. Event held annually in April.

www.ndsu.edu/dce
WORKSHOP LEADERS
NDSU faculty and graduate students in science-related fields of study are invited to develop and lead a workshop at this annual conference. Workshop leaders donate time individually or with a group of graduate students in the same academic field.

Connect with K-12 students; build your curriculum vitae, gain experience in public outreach/extension, leadership, and teamwork; and practice presenting research in an engaging and educational way.

EVENT ASSISTANTS
Another way to be involved is to volunteer as an event assistant. Event assistants help plan the event, guide participants to workshops, give directions to students, guide bus drivers to parking, and assist with conference check-in.

HIGH-SCHOOL STUDENTS
You are invited to attend this fun and engaging series of hands-on workshops that introduce you to different careers in sciences. Participate in activities, pose questions to the presenters, or just come witness science in action.

There are many opportunities to meet individuals from NDSU who share your interest in these careers. We encourage you to get to know the leaders of the workshops you really enjoy because they have a wealth of knowledge about the subject.

SCHOOL DISTRICTS
School districts are welcome to bring groups of students to this event. To have your school participate, contact the event coordinators. Register your school today!
