The INBRE Newsletter is distributed to faculty, students, and staff at both North Dakota State University (NSDU) and the tribal colleges and universities in the surrounding region. The newsletter is sent to community members who are involved with the INBRE program including partners and local organizations. In addition, the newsletter is distributed to other NDSU departments and within the University of North Dakota’s (UND) INBRE program.
The Summer Undergraduate Research Program (SURP) report is distributed to students, staff, and faculty at North Dakota State University (NDSU). It is also sent to members within the INBRE network including NDSU departments and the University of North Dakota’s (UND) INBRE program. The report is given to community partners who work to make SURP possible, local organizations part of SURP, and other interested parties who would like to learn more about the program.
The North Dakota State University (NDSU) INBRE program aims to provide students with resources and opportunities, which enhance their familiarity with undergraduate research. The INBRE team accomplishes this by promoting student opportunities and relevant information on their Facebook and Twitter pages. INBRE also distributes this information to the INBRE Listserv which contains contacts from the tribal colleges and universities, NDSU, and other INBRE collaborators. In addition, these opportunities are also posted on the SURP webpage and the INBRE webpage.
The North Dakota State University (NDSU) INBRE program has created a series of research training modules which help tribal college students learn more about research topics, methods, and ways to become involved with research. These training modules are distributed to the tribal colleges and universities online and are used by students, staff, and faculty at these institutions. The modules are also created and utilized by students, staff, and faculty at NDSU. During the Summer Undergraduate Research Program (SURP), students have a chance to view the modules and the SURP team uses the material to create lesson plans for the students.
The Air Quality Study is a project that is sub-contracted through the North Dakota State University (NDSU) INBRE program. Students, staff, and faculty from Nueta-Hidatsa-Sahnish College (NHSC) are awarded the sub-contracted funds and carry out air quality experiments at the college campus. Students from NHSC have presented their work at several local, regional, and national conferences during the span of the study. In addition, other North Dakota tribal colleges have been involved with NHSC in collaboration. The study results are distributed to the National Institutes of Health and the University of North Dakota’s (UND) INBRE program.
