NDSU is an EQ/AA University

## **Acknowledgments**

Special thanks are extended to several individuals from the North Dakota University System Office and the North Dakota Career Resource Network in Bismarck.

Terry Meyer for her administrative oversight of the project.  
Laura Glatt for her editorial suggestions during preparation of the document.  
Robin Putnam for providing data for each individual higher education institution.  
Mick Pytlik for providing information about the System Info Tech Services.  
Kathryn Holle for providing information on student expenses and spending.

Thanks are given to Norma Ackerson and Edie Nelson for document preparation and to our colleagues for reviewing this manuscript.

Financial support was provided by the North Dakota University System.

## Executive Summary

The North Dakota University System (NDUS) consists of the NDUS Office and 11 college campuses located throughout the state. In addition to the 11 main campuses, numerous other university facilities, centers, and offices are located throughout the state. Institutions of higher education have an economic effect in their respective areas and across the state as those institutions acquire inputs, purchase services, and provide for payroll and employment at both the local and state level. NDUS expenditures include general fund sources (e.g., state appropriated monies) and non-general fund sources (i.e., grants, contracts, donations). NDUS in-state expenditures for fiscal year (FY) 2013 comprise the direct economic impact or ‘first round effects.’ The North Dakota Input-Output Model was used to estimate the secondary economic effects as those direct effects (i.e., expenditures) are circulated and re-spent in the economy. The model estimates the changes in gross business volume (gross receipts) for all sectors of an economy and is used to provide key economic indicators such as retail trade activity, economy-wide personal income, gross business volume, secondary employment, and state-level tax receipts.

The total economic impact of NDUS is \$4.8 billion in 2013, compared to \$4.4 billion in 2011.

- Direct economic impacts (expenditures) of \$1.3 billion, of which \$873 million were expenditures from non-general fund sources
- Direct expenditures from general and non-general funds created a gross business volume of \$3.8 billion, which included \$923 million in retail trade activity and \$1.5 billion in economy-wide personal income
- Economic output in the retail trade sector (\$923 million) generated \$42.7 million in sales and use tax collections, and economy-wide personal income of \$1.5 billion generated about \$22.2 million in individual income tax collections in North Dakota
- Direct head count employment by the NDUS was 11,369 positions (excluding student jobs)
- Secondary (indirect and induced) employment resulting from the business activity generated by the NDUS was estimated at 10,760 jobs
- Enrollment in the 11 member universities and colleges in the Fall of 2012 was 38,703 full-time equivalent students
- Student living expenses were estimated at \$415 million and were in addition to institution spending
- Increased business activity generated by student spending was estimated at \$1.0 billion, which included \$467 million in retail trade activity and \$250 million of economy-wide personal income and would support about 1,900 secondary jobs
- State appropriated general funds for higher education have increased in recent years. Non-general fund portion of the total NDUS expenditures has declined from 74 percent in FY2004 to 68 percent in FY2013

# **Economic Contribution of the North Dakota University System**

Randal C. Coon, Dean A. Bangsund, and Nancy M. Hodur\*

The North Dakota University System (NDUS) is comprised of the NDUS Office and 11 college campuses, and their related entities located throughout the state. These institutions contribute to the state and local economies through expenditures for inputs and services and through personal spending by staff, faculty, and students. Previous studies have estimated the economic contribution of the NDUS for fiscal years (FY) 1999 and 2004 (Leistritz and Coon 2005), FY2006 (Leistritz and Coon 2007), FY2008 (Leistritz and Coon 2009), FY2009 (Bangsund et al. 2010), and FY2011 (Coon et al. 2012). This study will provide a similar analysis for FY2012 and FY2013. Recent studies have analyzed the economic contribution for the NDUS every other year, however, this report will include FY2012 to provide a more complete data base.

The NDUS experienced substantial growth during the 1999-2013 period. The number of students attending schools in the NDUS has increased since 1999. Employment at the 11 universities has also increased since 1999. Expenditures to operate the NDUS have increased steadily over the FY1999 to FY2013 period, with much of the funding coming from the federal government and/or other out-of-state sources, primarily for research and economic development activities.

The economic contribution of the NDUS was estimated with consideration given to the source of revenue for the system colleges and universities. General fund revenues are primarily received from state government appropriations. Non-general fund revenues come from sources other than the appropriated state tax revenue. Examples of non-general fund revenues are federal grants, private grants, private/public research contracts, and donations. The main body of the report focuses on the NDUS and the economic effects of general and non-general fund expenditures by colleges and universities. An abbreviated economic impact analysis for each of the 11 campuses in the state and the NDUS Office are appended to the end of this report.

## **Methods**

The initial task in any impact assessment is estimating the direct effects or first round of spending associated with an activity, project, or program. The NDUS Office provided FY2012 and FY2013 financial data for each of the 11 institutions and the NDUS Office. Also provided were Fall 2011 and 2012 student enrollment data and university employment numbers for each of the state's 11 public colleges and universities. The expenditure data were provided for the same budget categories as previous studies (i.e., FY1999, FY2004, FY2006, FY2008, FY2009, and FY2011 analyses) giving a long-term consistent data base (see Appendix A). Data were provided for general and non-general fund expenditures. As part of the budget expense categories, capital improvement (building) and capital equipment expenditures for each of the institutions were also included.

Actual expenditures data were used for this analysis, not amounts presented in budgets. Expenditure data were obtained from the ConnectND system. This system provided a data base that was reported annually for consistent line item categories for each year of the analysis. Expenditures for each individual institution may not correspond exactly with that institution's

---

\*The authors are, respectively, research specialist, research scientist, and research assistant professor in the Department of Agribusiness and Applied Economics, North Dakota State University, Fargo.

financial statement, but were the data provided by the NDUS computer network. The following colleges and universities, along with their respective centers and stations, were included in the ConnectND data system:

- NDUS Office (including Core Technology Services)
- Bismarck State College
- Dickinson State University
- Lake Region State College
- Mayville State University
- Minot State University
- Dakota College Bottineau
- North Dakota State College of Science
- North Dakota State University
  - Agricultural Experiment Station:
    - NDSU Main Research Center
    - Dickinson Research Extension Center
    - Central Grasslands Research Extension Center
    - Hettinger Research Extension Center
    - Langdon Research Extension Center
    - North Central Research Extension Center
    - Williston Research Extension Center
    - Carrington Research Extension Center
    - Agronomy Seed Farm
  - Northern Crops Institute
  - Upper Great Plains Transportation Institute
  - NDSU Cooperative Extension Service
  - North Dakota Forest Service
- University of North Dakota
  - School of Medicine and Health Sciences
- Valley City State University
- Williston State College

Data for organizations such as development foundations and university/private partnerships (e.g., NDSU Research & Technology Park) are not included in the ConnectND data base. Therefore, the financial activity of those entities is not reflected in this analysis. The absence of those expenditure data, in some cases, understates the economic effects of the NDUS. However, despite those omissions, the ConnectND data set provides a consistent, accurate, and annual data base for an economic contribution analysis.

Spending on capital improvements came from both general fund and non-general fund sources. Non-general fund construction would have been funded by external sources such as grants, contracts, and donations. All expenditure data were in current year dollar values (also called nominal dollars), meaning dollar values have not been adjusted for inflation. Some of the growth reported in expenditures would be accounted for with inflation. In other words, some growth in expenditures would be required to keep spending steady on a real basis (i.e., account for inflationary changes in the purchasing power of the dollar). The Consumer Price Index suggests inflation during the 1999-2013 period was 40 percent (Bureau of Labor Statistics 2014). Therefore, a 40 percent increase in expenditures from 1999 to 2013 would be required to represent a zero change in expenditures if corrected for inflation (i.e., dollars expressed in real terms).

The North Dakota Input-Output Model was used to estimate the secondary economic impacts based on NDUS expenditure data. The North Dakota Input-Output Model consists of interdependence coefficients, or multipliers, that measure the level of business activity generated in each economic sector from an additional dollar of expenditures in a given sector. (A sector is a group of similar economic units, e.g., the firms engaged in retail trade make up the retail trade sector.) For a complete description of the input-output model, see Coon and Leistritz (1989). The model estimates the changes in total business activity (gross receipts) for all sectors of the area economy resulting from the direct expenditures associated with the NDUS. The increased business volumes are used to estimate secondary employment and tax revenues based on historic relationships. The procedures used in the analysis are parallel to those used in estimating the impact of other facilities and activities in North Dakota (Leistritz 1995; Bangsund and Leistritz 2004). Empirical testing has confirmed the model's accuracy in estimating changes in levels of economic activity in North Dakota; over the period 1958-2012, estimates of statewide personal income derived from the model averaged within 7 percent of comparable values reported by the U.S. Department of Commerce (Leistritz et al. 1990; Coon et al. 2014).

This analysis also includes the economic impact of student spending. Student spending has an economic impact beyond that of the NDUS. Estimated costs of education for the 2011-2012 and 2012-2013 academic years were obtained from the North Dakota Career Resource Network (2012; 2013). Those expenditures provide an indication of the economic contribution of student spending in the state.

### **NDUS Economic Contribution**

The NDUS operating budget increased 140 percent from \$533 million in FY1999 to \$1.3 billion in FY2013 (Table 1). Wages and salaries represented the largest itemized expense for that period. Wages and salaries were \$226 million in FY1999 (42 percent of total) and grew to \$512 million in FY2013 (40 percent of total). The percentage of total general and non-general fund expenditures for wages and salaries has remained essentially unchanged in the 40 to 42 percent range during the 14-year period of the analysis (Table 1). Fringe benefits represented the second largest itemized expenditure, increasing from \$56 million in FY1999 (10.5 percent of total) to \$164 million in FY2013 (12.8 percent of total). Wages and salaries plus benefits equaled \$281 million in FY1999, \$405 million in FY2004, \$451 million in FY2006, \$486 million in FY2008, \$524 million in FY2009, \$630 million in FY2011, and \$675 million in FY2013. Salaries and wages, along with benefits, averaged over 50 percent of university expenditures over the past 14 years (Table 1).

Capital Improvements	<u>26,529</u>	<u>62,243</u>	<u>39,488</u>	<u>45,246</u>	<u>34,084</u>	<u>71,095</u>	<u>76,797</u>	<u>83,832</u>	216.0	17.9
Total	532,922	761,320	828,104	940,299	980,365	1,165,339	1,243,974	1,281,610	140.5	10.0

Capital improvements were \$26 million in FY1999, \$62 million in FY2004, \$39 million in FY2006, \$45 million in FY2008, \$34 million in FY2009, \$71 million in FY2011, \$77 million in FY2012, and \$84 million in FY2013. Expenditures for construction are often based on availability of funds from a variety of sources. General fund monies allocated to capital improvements come from tax revenues and generally reflect the economic welfare of the state during each legislative biennium. With the exception of FY2004, capital improvement expenditures for FY2011, FY2012, and FY2013 were noticeably higher than for the other years included in the analysis. A large share of the capital improvements during the FY1999-FY2009 period have come from non-general fund sources, but since then a greater share has come from appropriated general fund revenue.

As the state's higher education institutions have expanded their roles in research, economic development, outreach, and developed community and industrial partnerships, sources of funding for many of the universities' activities also have changed. Non-general fund revenue (grants, contracts, donations) has become an important source of growth in the higher education system in ND. In FY1999, \$333 million of non-general fund expenditures comprised 62 percent of the total expenditures by the University System in ND; these outlays increased to \$535 million in FY2004, 70 percent of the total (Table 2). In FY2006, non-general fund expenditures were \$614 million, which accounted for 74 percent of the University System's expenditures. Non-general fund expenditures increased to \$689 million in FY2008, 73 percent of the total budget. In FY2009, non-general fund expenditures were \$706 million and represented 72 percent of all expenditures. Non-general fund expenditures for FY2011 (\$817 million) represented 70 percent of the NDUS total for that year. Non-general fund expenditures for FY2013 were \$873 million, which represents 68 percent of the total for the NDUS that year. Increased general fund appropriations for higher education in North Dakota have resulted in non-general fund's share of total expenditures declining from a recent high of 74 percent in FY 2006 to 68 percent in FY2013. State revenues have been enhanced by a strong economy and the recent development of oil reserves in the Bakken/Three Forks Formations. Capital improvements attributed to non-general fund expenditures in FY2013 (\$35 million) were higher than in FY2009 (\$19 million), and FY2011 (\$34 million) but lower than the highest amount for the study years, FY2004 (\$52 million).

Non-general fund expenditures have increased \$540 million since FY1999 or by 162 percent over the 14-year period. The majority of non-general fund expenditures was for wages and salaries over the 14-year period. In FY 2013, salaries and wages from non-general fund sources accounted for 64 percent of all expenditures for wages and salaries. Thus, two-thirds of NDUS wages and salaries for staff and faculty come from sources other than state government appropriations. It is likely that in the absence of external funding for wages and salaries, overall employment in the NDUS could be expected to be much lower than current levels. Non-general fund revenue not only provides funding for wages and salaries and capital improvement projects, but also provided \$83 million in scholarships in FY2013. The steady increase in non-general fund expenditures have helped support the NDUS.

**Table 2. Direct Economic Impacts from Non-General Fund Expenditures, NDUS, by Budget Category, Selected Fiscal Years 1999 to 2013  
(Current Year Dollars)**

Expenditures made by the NDUS comprise the direct impacts or first-round effects on the state's economy. These expenditures were reported for the NDUS total (General Fund and Non-General Fund) in Table 1 and for Non-General fund in Table 2. The economic effects of those first-round expenditures are distributed in numerous locations through out the state. Total direct impacts were \$533 million in FY1999, \$761 million in FY2004, \$828 million in FY2006, \$940 million in FY2008, \$980 million in FY2009, \$1.2 billion in FY2011, \$1.2 billion in FY2012, and \$1.3 billion in FY2013. (Table 3). These expenditures were allocated to six economic sectors of the North Dakota Input-Output Model. Applying these expenditures to the North Dakota Input-Output Model interdependence coefficients (i.e., multipliers) provides total (direct and secondary) economic impacts for General Fund and Non-General Fund outlays. Similarly, the non-general fund expenditures were allocated to six Input-Output Model sectors. Non-general fund direct impacts were \$333 million in FY2004, \$535 million in FY2004, \$614 million in FY2006, \$689 million in FY2008, \$706 million in FY2009, \$817 million in FY2011, \$856 million in FY2012, and \$873 million in FY2013 (Table 3). Applying these expenditures to the North Dakota Input-Output Model resulted in estimates of the total economic impact (direct and secondary) from non-general fund outlays.

Total (direct and secondary) economic effects associated with the NDUS were estimated by applying the input-output model coefficients to the level of expenditures by economic sector . The combination of direct and secondary economic effects are sometimes referred to as total business activity. Business volumes were estimated for both total expenditures (general and non-general fund) and for only non-general fund expenditures (Table 4).

**Table 3. Direct Economic Impacts from Total (General Fund and Non-General Fund) and Non General Fund Expenditures, Allocated to the North Dakota Input-Output Model Industrial Sectors, Selected Fiscal Years 1999 to 2013 (Current Year Dollars)**

Total	332,901	534,943	613,800	689,459	705,830	816,921	856,368	872,851	162.2	6.8

Levels of business activity associated with general and non-general fund expenditures in the state were estimated at \$1.6 billion in FY1999, \$2.2 billion in FY2004, \$2.4 billion in FY2006, \$2.8 billion in FY2008, \$2.9 billion in FY2009, \$3.5 billion in FY2011, \$3.7 billion in FY2012, and \$3.8 billion in FY2013 (Table 4). The total business activity for the NDUS has increased by \$2.2 billion or by 142 percent over the 14-year period. Economic sectors of the ND economy that received major contributions include *Households* (i.e., economy-wide personal income of state residents), *Retail Trade*, *Construction*, and *Finance, Insurance and Real Estate*. Retail trade activity amounted to \$393 million in FY1999 and \$923 million in FY2013. Economic activity in the *Retail Trade* Sector increased by \$530 million or by 135 percent over the period. The University System was estimated to increase economy-wide personal income (i.e., *Households* Sector) in North Dakota from \$613 million in FY1999 to \$1.5 billion in FY2013. Levels of business activity resulting from the NDUS including student living expenditures would support 12,138 secondary (indirect and induced) full-time equivalent (FTE) jobs in 1999 and 10,760 FTE secondary jobs in 2013 (Table 5). These jobs represent employment in addition to the 8,120 persons employed by the NDUS in 1999 and the 11,369 positions (excluding student jobs) in 2013 (Table 5).

North Dakota's rapidly growing economy has resulted in large increases in the total business activity, or gross business volume. Productivity ratios (used to estimate secondary employment) are determined by dividing the gross business volume in each economic sector by the corresponding employment in that sector. Productivity ratios have increased greatly due to the state's expanding economy in recent years. This has caused secondary employment attributable to the NDUS levels of business activity to decline slightly in recent years. Increased productivity from technological advances, rapid growth in the state economic base, and inflation which have all caused productivity ratios (the number of dollars required to create an additional job in each respective economic sector) to increase. In FY2013, retail trade activity (\$923 million) would generate about \$42.7 million in additional sales and use tax collections in the state. Similarly, economy-wide personal income of \$1.5 billion would generate \$22 million in state income tax collections.

A similar analysis was conducted for non-general fund expenditures (Table 4). Non-general fund outlays in FY1999 generated total business activity of nearly \$1.0 billion, \$1.6 billion in FY2004, \$1.8 billion in FY2006, and about \$2.0 billion in FY2008 and FY2009, \$2.4 billion in FY2011, \$2.5 billion in FY2012, and \$2.5 billion in FY2013. Business activity in the state from non-general fund expenditures in the NDUS increased by 166 percent over the 14-year period. Overall activity in the *Retail Trade* Sector was estimated at \$248 million in FY1999 and \$646 million in FY2013; levels sufficient to generate \$11.5 million and \$29.9 million in increased sales and use tax collections for the respective years. Economy-wide personal income of \$985 million in FY2013 would generate \$14.8 million in state individual income tax collections.

The economic effects associated with non-general fund expenditures comprise a substantial share of the total NDUS economic contribution. Both the relative share of NDUS spending that comes from non-general funds sources and that the share has been increasing over the 14-year period highlight the importance that outside financial support plays in the economic effects on the North Dakota economy.

<sup>1</sup> NDUS employment is a June 30<sup>th</sup> employee head count consisting of faculty, classified, other non-classified and temporary positions. Student workers were not included in this total.

<sup>2</sup> Secondary employment is full-time equivalent workers. Estimates are based on business activity from university expenditures and student living expenses. A new methodology for estimating secondary employment was developed in 2011 and has been used for all subsequent analyses. This methodology will eliminate possible overestimation of secondary workers due to economic factors such as technological changes, excess capacity, and constrained economic variables. Secondary employment for each year the analysis has been completed (1999-2013) and was calculated using the new methodology to provide a consistent time-series data base. Reductions in secondary employment are a reflection of the new methodology and not a result of university system expenditures having a smaller role in secondary job creation.

<sup>3</sup> Student enrollment is full-time equivalent students.

## Student Economic Contribution

Student spending also adds to the economic contribution of the NDUS. Student spending included outlays for personal items, recreation, books, supplies, and room and board. Excluded from student expenditures were outlays for tuition and fees. Estimates of student expenditures were available for each of the 11 institutions in the NDUS (North Dakota Career Resource Network 2011; 2013) for the 2011-2012 and 2012-2013 school years. The North Dakota Career Resource Network estimated room and board and books and supplies for students at each of the 11 respective institutions in the NDUS for the 2011-2012 and 2012-2013 school years. Also, personal, recreation, and miscellaneous costs were estimated to be \$3,400 for the 2011-2012 and 2012-2013 school years. Student living expenditures were estimated to range from \$9,030 per student per academic year at Dakota College Bottineau to \$11,312 per student per academic year at North Dakota State University for the 2011-2012 school year (Appendix Table A18). The

situation changed for the 2012-2013 school year, with Dakota College Bottineau still having the lowest student living expenses (\$9,407), but Williston State College had the highest (\$11,870). This is consistent with the cost-of-living increases in Williston associated with the development of oil resources in that area. Demand for all goods and services resulting from economic and population growth, are resulting in unprecedented increases in the cost-of-living in that area. North Dakota State University had the second highest student living expenses (\$11,604) for the 2012-2013 school year.

Multiplying the Fall 2011 and 2012 FTE student enrollment for each school by their respective per-student living expenditures provided an estimate of direct impacts or first-round effects associated with student spending for each school year. However, the use of ND Career Resource Network estimates of room and board expenses may overstate the economic effects of student expenditures. Although a large number of students live on-campus or live independently off-campus, some students live at home. Students living at home would likely incur less expense for room and board compared to those living on-campus or independently off-campus. Another factor that complicates the estimation of the effects of student spending is that some of the revenues for room and board for students living in university dormitories could be considered double counting with expenditures by the universities. The revenues received by universities and colleges for on-campus room and board would likely be dispersed by the universities for inputs and services associated with student housing. As such, expenditures for providing student housing are probably partially captured by the analyses of university spending. Therefore, including room and board expenses for all students might result in some double counting of University System expenditures. Data were unavailable to adjust the economic contribution of student spending to account for those students living at home or to adjust for the percentage of room and board expenses already captured by University System expenditures.

Another area of potential double counting could occur in how expenses are handled for books and other educational materials. Books and educational materials purchased by students through campus-sponsored book stores or at on-campus varsity marts also are likely to be fully or partially captured by university expenditures. Since those facilities are part of the university or college, expenses for staff, facilities, and materials/inventory would necessarily be included in the university analysis. Further, it is highly likely that a large percentage of college text books would be acquired from entities outside of North Dakota and would not represent in-state expenditures by universities and colleges. However, to the extent that educational materials are purchased by students from off-campus sources, those expenditures would not represent double counting. The degree of overlap between student spending for books and educational supplies and university expenditures associated with book stores and varsity marts is unknown, as is the degree of those supplies purchased by universities from out-of-state entities. Despite these potential problems, the cost of books was included in the student spending analysis for consistency with previous analyses.

In Fall 2011, NDUS indicated that 39,089 FTE students were enrolled and in Fall 2012 38,703 FTE students attended the 11 state universities and colleges. Based on expenditures per FTE student, students were estimated to have spent \$409.4 million in North Dakota on books, room and board, personal items, and recreation during the 2011-2012 (Table 6) and \$415.4 million during the 2012-2013 school year. Of course, students also incur expenses for fees, tuition, and other items not covered in this analysis. Those expenditures were not included in this study and would be captured by the analysis of university expenditures.

A large share of the student spending would occur in the communities where the institutions are located, due to the nature of their purchases (i.e., books, supplies, and room and board). Some of the student expenditures for recreation and personal items will occur in cities and trade areas other than those where the university or college is located. However, for this analysis, all student spending will be assumed to remain in close proximity to the community where the college or university is located (data presented for each university in Appendix B).

Student spending was estimated at \$409 million for the 2011-2012 academic year and \$415 million for the 2012-2013 school year, which most closely approximates FY2012 and FY2013 (Table 6), respectively. The \$409 million and \$415 million in student expenditures would be in addition to expenditures made by the NDUS universities and colleges, considering the potential problems identified earlier in this section. In 2012-2013, student direct expenditures were 32.4 percent of the general and non-general fund expenditures made by the NDUS.

Student spending was allocated to the *Retail Trade* (75 percent) and *Finance, Insurance, and Real Estate* (25 percent) Sectors of the North Dakota Input-Output Model. The total economic contribution associated with student spending was estimated at \$1.0 billion in FY2013. The sector that received the largest impact was the *Retail Trade* Sector, with \$467 million in retail trade activity. The *Household* Sector (economy-wide personal income) was estimated at \$250 million in FY2013. Retail trade activity would generate \$21.6 million in sales and use tax collections, while personal income tax collections were estimated to be \$3.8 million as the result of increased economic activity in the *Household* Sector. The gross business volume resulting from NDUS student spending would support about 1,900 secondary (indirect and induced) jobs in the state in FY2013.

## Conclusions

The NDUS consists of 11 colleges and universities located throughout the state. Those universities receive revenues from state appropriated funds, state grants, federal grants, and from private grants, contracts, and donations. The universities and colleges have positive effects on the state economy and local economies as those revenues are used to purchase inputs and services and pay wages and salaries. Expenditure data for the NDUS came from the ConnectND system.

The NDUS was responsible for \$533 million in direct expenditures within North Dakota in FY1999. By FY2013, direct expenditures within ND had increased by 140 percent to \$1.3 billion. Much of the growth during this 14-year period has come from non-general fund sources, such as grants, contracts, and donations, which increased by 162 percent over the period. Non-general fund expenditures represented nearly 68 percent of the total direct spending by the NDUS in FY2013.

The North Dakota Input-Output Model was used to estimate the amount of business activity generated from expenditures by the NDUS. The total direct effects, \$1.3 billion in NDUS expenditures, were allocated to various sectors of the ND I/O Model. Interdependence coefficients within the model were then used to estimate the secondary economic effects. Combining direct and secondary economic effects provides an estimate of the gross business volume. The gross business volume associated with the NDUS was estimated at \$1.6 billion in FY1999, \$2.2 billion in FY2004, \$2.4 billion in FY2006, \$2.8 billion in FY2008, \$2.9 billion in FY2009, \$3.5 billion in FY2011, \$3.7 billion in FY2012, and \$3.8 billion in FY2013. Other key measures of economic impact include retail trade activity and economy-wide personal income. Retail trade sales attributed to the NDUS expenditures were estimated at \$393 million, \$537 million, \$598 million, \$684 million, \$709 million, \$832 million, \$838 million, and \$923 million in fiscal years 1999, 2004, 2006, 2008, 2009, 2011, 2012, and 2013 respectively. Economy-wide personal income was estimated to be \$613 million in FY1999, \$887 million in FY2004, \$969 million in FY2006, \$1.07 billion in FY2008, \$1.14 billion in FY2009, \$1.38 billion in FY2011, \$1.45 billion in FY2012, and \$1.48 billion in FY2013.

Student expenditures create an economic impact that is in addition to that of the NDUS. Student spending, excluding tuition and fees, was estimated at \$415 million in FY2013. The business activity associated with spending from the 38,703 FTE students enrolled in the NDUS during the 2012-2013 academic year was estimated at \$1.03 billion.

Overall, student spending and NDUS expenditures were estimated at \$1.7 billion in FY2013. Including secondary economic impacts raises the total economic impact to \$4.8 billion. State-level effects included \$1.4 billion in additional retail trade activity and \$1.7 billion of economy-wide personal income. Retail trade activity would generate \$64.3 million in sales and use tax collections, and \$26.0 million of personal income tax revenues when the expenditures of the NDUS and student spending are combined.

Institutions of higher education in North Dakota are influential in many perspectives. They help provide the state with an educated workforce ready to meet the challenges of an ever changing work environment. They provide outreach and continuing education programs for the state's residents and businesses. In addition to providing education, the state's universities and colleges create and support jobs and employment opportunities through research, extension, and

teaching activities. All these important services and products provide economic benefits which enhance local and state economies.

Essentially, the state's 11 University System colleges, universities, and supporting centers and facilities act as centers for local and regional economic development. The state's colleges and universities are able to leverage \$2.14 from external sources for every dollar of state appropriated funds. Much of those non-appropriated funds come from outside sources, and could be considered new money to the state of North Dakota. Those dollars, along with appropriated funds, are dispersed within the state through purchase of services, inputs, and payroll that support university programs, events, and activities. In FY2013, these institutions employed over 11,000 workers, were educating 48,203 headcount students (38,703 full-time equivalents), and their expenditures supported over 10,700 FTE secondary jobs.

The NDUS has a strong economic presence in the state. The universities and colleges in the state continue to serve as example of the importance of higher education and the benefits that a strong University System can have on the quality of life in North Dakota.

<sup>1</sup> Headcount is all students enrolled regardless of number of credit hours.

<sup>2</sup> Full-time is students enrolled in 12 credit hours or more.

<sup>3</sup> In August 2006, the SBHE changed the definition of undergraduate FTE to 15 credit hours from 16. This new definition is compatible with National Integrated Post- Secondary Education Data System (IPEDS) reporting requirements. FTE students is calculated by dividing accumulated undergraduate student credit hours by 15 credit hours plus total graduate credit hours by 12. A professional student is counted as one FTE.

<sup>4</sup> Includes 89 VCSU elementary education students located on the NDSU campus.

<sup>5</sup> Fall enrollment 2012 (2012-2013 academic year) closely corresponds to FY2013 (July 1, 2012 to June 30, 2013). FY2013 data were the most recent available. Accordingly, student FTE changes compared to 2012 represent changes in enrollment corresponding with FY2013.

## **APPENDIX B**

Economic Contribution to North Dakota,  
NDUS Member Universities and Colleges,  
Fiscal Years 1999, 2004, 2006, 2008, 2009, 2011, 2012, and 2013

## Bismarck State College

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Bismarck State College in the Bismarck area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period 1999-2013 was 40 percent.

Expenditures by Bismarck State College comprise the direct impacts, or "first round effects". Expenditures by Bismarck State College were \$17.9 million in FY1999, \$27.7 million in FY2004, \$29.6 million in FY2006, \$37.7 million in FY2008, \$40.2 million in FY2009, and \$50.9 million in FY 2011, \$49.6 million in FY2012, and \$51.5 million in FY2013 (Appendix Table B1). Expenditures increased over the 14-year period by \$33.6 million or by 188 percent.

Total impacts associated with Bismarck State College were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$52.1 million in FY1999, \$81.2 million in FY2004, \$87.8 million in 2006, \$109.3 million in FY2008, \$116.0 million in FY2009, \$149.3 million in FY2011, \$147.1 million in FY2012, and \$151.4 million in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$20.9 million in FY1999 to \$59.5 million in FY2013 or by 184.8 percent. Other sectors receiving major contributions included *Retail Trade, Construction, Finance, Insurance, and Real Estate, and Business and Personal Services*. Increased retail trade activity was estimated at \$13.7 million in FY1999, \$20.8 million in FY2004, \$22.0 million in FY2006, \$26.8 million in FY2008, \$30.8 million in FY2009, \$37.1 million in FY2011, \$35.9 million in FY2012, and \$37.7 million in FY2013. This represents a \$24.0 million (174.7 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$1.7 million in sales and use tax collections for FY2013, compared to \$636,000 in FY1999 and \$1.4 million in FY2009. Personal income tax collections were estimated to be \$314,000 in FY1999, \$483,000 in FY2004, \$531,000 in FY2006, \$634,000 in FY2008, \$680,000 in FY2009, \$885,000 in FY2011, \$884,000 in FY2012 and \$893,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Bismarck State College expenditures would support 355 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 612 positions (excluding student jobs) at Bismarck State College in 2013. In the Fall of 2012, 2,990 full-time equivalent students were enrolled at Bismarck State College.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Bismarck area were \$30.4 million in FY2013. The total economic contribution of student spending was \$75.5 million. Student spending was estimated to generate an additional \$1.6 million in sales and use tax revenue and \$275,000 in personal income tax collections. This level of student spending would create enough business activity to support about 140 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

**Appendix Table B1. Direct and Total Economic Impacts for Bismarck State College, Selected Fiscal Years 1999 to 2013 (Current Year Dollars)**

Item	FY1999	FY2004	FY2006	FY2008	FY2009	FY2011	FY2012	FY2013	Change

## Dickinson State University

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Dickinson State University in the Dickinson area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Dickinson State University comprise the direct impacts, or "first round effects". Expenditures by Dickinson State University were \$14.9 million in FY1999, \$23.0 million in FY2004, \$28.9 million in FY2006, \$31.1 million in FY2008, \$37.5 million in FY2009, \$37.3 million in FY2011, \$35.8 million in FY2012, and \$30.0 million in FY2013 (Appendix Table B2). Expenditures increased over the 14-year period by \$15.0 million or by 101 percent.

Total impacts associated with Dickinson State University were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$43.6 million in FY1999, \$67.2 million in FY2004, \$84.4 million in 2006, \$92.6 million in FY2008, \$109.6 million in FY2009, \$111.3 million in FY2011, \$107.4 million in FY2012, and \$90.6 million in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$17.3 million in FY1999 to \$36.8 million in FY2013 or by 113 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated at \$10.7 million in FY1999, \$16.5 million in FY2004, \$20.6 million in FY2006, \$22.5 million in FY2008, \$25.7 million in FY2009, \$26.5 million in FY2011, \$25.3 million in FY2012, and \$21.4 million in FY2013. This represents a \$10.8 million (101.0 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$1.0 million in sales and use tax collections for FY2013, compared to \$493,000 in FY1999 and \$1.2 million in FY2009. Personal income tax collections were estimated to be \$259,000 in FY1999, \$402,000 in FY2004, \$503,000 in FY2006, \$565,000 in FY2008, \$646,000 in FY2009, \$677,000 in FY2011, \$654,000 in FY2012, and \$553,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Dickinson State University expenditures would support 218 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 247 positions (excluding student jobs) at Dickinson State University in 2013. In the Fall of 2012, 1,454 full-time equivalent students were enrolled at Dickinson State University.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Dickinson area were \$14.1 million in FY2013. The total economic contribution of student spending was \$35.0 million. Student spending was estimated to generate an additional \$734,000 million in sales and use tax revenue and \$128,000 in personal income tax collections. This level of student spending would create enough business activity to support 64 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## Lake Region State College

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Lake Region State College in the Devils Lake area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Lake Region State College comprise the direct impacts, or "first round effects". Expenditures by Lake Region State College were \$6.7 million in FY1999, \$9.2 million in FY2004, \$10.2 million in FY2006, \$11.4 million in FY2008, \$11.8 million in FY2009, \$15.1 million in FY2011, \$20.5 million in FY2012, and \$21.1 million in FY2013 (Appendix Table B3). Expenditures increased over the 14-year period by \$14.4 million or by 213 percent.

Total impacts associated with Lake Region State College were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$19.6 million in FY1999, \$27.3 million in FY2004, \$30.1 million in 2006, \$33.9 million in FY2008, \$35.2 million in FY2009, \$45.5 million in FY2011, \$59.4 million in FY2012, and \$60.8 million in FY2013. The sector with the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$7.9 million in FY1999 to \$22.9 million in FY2013 or by 191 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$4.9 million in FY1999, \$6.6 million in FY2004, \$7.2 million in FY2006, \$8.3 million in FY2008, \$8.5 million in FY2009, \$11.2 million in FY2011, \$13.9 million in FY2012, and \$14.1 million in FY2013. This represents a \$9.2 million (185.4 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$652,000 in sales and use tax collections for FY2013, compared to \$228,000 in FY1999 and \$395,000 in FY2009. Personal income tax collections were estimated to be \$118,000 in FY1999, \$165,000 in FY2004, \$182,000 in FY2006, \$207,000 in FY2008, \$218,000 in FY2009, \$281,000 in FY2011, \$339,000 in FY2012, and \$344,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Lake Region State College expenditures would support 140 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 281 positions (excluding student jobs) at Lake Region State College in 2013. In the Fall of 2012, 973 full-time equivalent students were enrolled at Lake Region State College.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Devils Lake area were \$9.2 million in FY2013. The total economic contribution was \$22.8 million. Student spending was estimated to generate an additional \$478,000 in sales and use tax revenue, and \$83,000 in personal income tax collections. This level of student spending would create enough business activity to support 38 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## Mayville State University

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Mayville State University in the Mayville area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Mayville State University comprise the direct impacts, or "first round effects". Expenditures by Mayville State University were \$9.4 million in FY1999, \$15.8 million in FY2004, \$13.7 million in FY2006, \$14.0 million in FY2008, \$14.6 million in FY2009, \$24.5 million in FY2011, \$21.0 million in FY2012, and \$20.6 million in FY2013 (Appendix Table B4). Expenditures increased over the 14-year period by \$11.2 million or by 118 percent.

Total impacts associated with Mayville State University were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$28.4 million in FY1999, \$45.2 million in FY2004, \$41.0 million in 2006, \$41.5 million in FY2008, \$43.5 million in FY2009, \$70.2 million in FY2011, \$62.3 million in FY2012, and \$61.8 million in FY2013. The sector with the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$11.3 million in FY1999 to \$24.7 million in FY2013 or by 118 percent. Other sectors receiving major contributions included *Retail Trade, Construction, Finance, Insurance, and Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$6.8 million in FY1999, \$10.3 million in FY2004, \$10.2 million in FY2006, \$10.2 million in FY2008, \$10.4 million in FY2009, \$16.2 million in FY2011, \$14.9 million in FY2012, and \$14.9 million in FY2013. This represents a \$8.1 million (118.0 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$691,000 in sales and use tax collections in FY2013, compared to \$317,000 in FY1999 and \$483,000 in FY2009. Personal income tax collections were estimated to be \$170,000 in FY1999, \$251,000 in FY2004, \$248,000 in FY2006, \$246,000 in FY2008, \$260,000 in FY2009, \$391,000 in FY2011, \$367,000 in FY2012, and \$371,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Mayville State University expenditures would support 146 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 256 positions (excluding student jobs) at Mayville State University in 2013. In the Fall of 2012, 759 full-time equivalent students were enrolled at Mayville State University.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Mayville area were \$7.7 million in FY2013. The total economic contribution was \$19.2 million. Student spending was estimated to generate an additional \$403,000 in sales and use tax revenue and \$70,000 in personal income tax collections. This level of student spending would create enough business activity to support nearly 36 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

**Appendix Table B4. Direct and Total Economic Impacts for Mayville State University, Selected Fiscal Years 1999 to 2013 (Current Year Dollars)**

Item	FY1999	FY2004	FY2006	FY2008	FY2009	FY2011	FY2012	FY2013	Change

## Minot State University

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Minot State University in the Minot area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Minot State University comprise the direct impacts, or "first round effects". Expenditures by Minot State University were \$30.1 million in FY1999, \$39.4 million in FY2004, \$46.3 million in FY2006, \$44.7 million in FY2008, \$48.5 million in FY2009, \$61.6 million in FY2011, \$77.0 million in FY2012, and \$62.1 million in FY2013 (Appendix Table B5). Expenditures increased over the 14-year period by \$32.0 million or by 106 percent.

Total impacts associated with Minot State University were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$89.0 million in FY1999, \$119.8 million in FY2004, \$136.5 million in 2006, \$135.1 million in FY2008, \$145.5 million in FY2009, \$183.6 million in FY2011, \$222.7 million in FY2012, and \$186.4 million. The sector with the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$36.3 million in FY1999 to \$75.4 million in FY2013 or by 108 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$21.2 million in FY1999, \$28.2 million in FY2004, \$33.0 million in FY2006, \$31.9 million in FY2008, \$34.2 million in FY2009, \$42.4 million in FY2011, \$49.5 million in FY2012, and \$42.7 million in FY2013. This represents a \$21.5 million (102 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$2.0 million in sales and use tax collections in FY2013, compared to \$981,000 in FY1999 and \$1.6 million in FY2009. Personal income tax collections were estimated to be \$545,000 in FY1999, \$744,000 in FY2004, \$827,000 in FY2006, \$845,000 in FY2008, \$899,000 in FY2009, \$1.1 million in FY2011, \$1.3 million in FY2012, and \$1.1 million in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Minot State University expenditures would support 443 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 601 positions (excluding student jobs) at Minot State University in 2013. In the Fall of 2012, 2,731 full-time equivalent students were enrolled at Minot State University.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Minot area were \$26.7 million in FY2013. The total economic contribution of student spending was \$66.4 million. Student spending was estimated to generate an additional \$1.4 million in sales and use tax revenue and \$242,000 in personal income tax collections. This level of student spending would create enough business activity to support about 123 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## Dakota College at Bottineau

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Dakota College at Bottineau in the Bottineau area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Dakota College at Bottineau comprise the direct impacts, or "first round effects". Expenditures by Dakota College at Bottineau were \$4.6 million in FY1999, \$5.4 million in FY2004, \$6.0 million in FY2006, \$6.7 million in FY2008, \$7.4 million in FY2009, \$9.5 million in FY2011, \$9.0 million in FY2012, and \$9.6 million in FY2013 (Appendix Table B6). Expenditures increased over the 14-year period by \$5.0 million or by 110 percent.

Total impacts associated with Dakota College at Bottineau were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$13.5 million in FY1999, \$15.9 million in FY2004, \$17.6 million in 2006, \$19.8 million in FY2008, \$21.9 million in FY2009, \$28.1 million in FY2011, \$27.1 million in FY2012, and \$28.7 million in FY2013. The sector with the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$5.4 million in FY1999 to \$11.5 million in FY2013 or by 111 percent. Other sectors receiving major contributions included *Retail Trade, Construction, Finance, Insurance, and Real Estate, and Business and Personal Services*. Increased retail trade activity was estimated to be \$3.3 million in FY1999, \$3.9 million in FY2004, \$4.2 million in FY2006, \$4.9 million in FY2008, \$5.3 million in FY2009, \$6.6 million in FY2011, \$6.6 million in FY2012, and \$6.8 million in FY2013. This represents a \$3.5 million (105.6 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$314,000 in sales and use tax collections in FY2013, compared to \$153,000 in FY1999 and \$248,000 in FY2009. Personal income tax collections were estimated to be \$81,000 in FY1999, \$97,000 in FY2004, \$105,000 in FY2006, \$120,000 in FY2008, \$132,000 in FY2009, \$169,000 in FY2011, \$166,000 in FY2012, and \$172,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Dakota College at Bottineau expenditures would support 69 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 182 positions (excluding student jobs) at Dakota College at Bottineau in 2013. In the Fall of 2012, 474 full-time equivalent students were enrolled at Dakota College at Bottineau.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Bottineau area were \$4.5 million in FY2013. The total economic contribution was \$11.1 million. Student spending was estimated to generate an additional \$232,000 in sales and use tax collections and \$40,000 in personal income tax collections. This level of student spending would create enough business activity to support 20 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## North Dakota State College of Science

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of North Dakota State College of Science in the Wahpeton area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by North Dakota State College of Science comprise the direct impacts, or "first round effects". Expenditures by North Dakota State College of Science were \$30.6 million in FY1999, \$34.7 million by FY2004, \$35.6 million in FY2006, \$39.7 million in FY2008, \$40.5 million in FY2009, \$44.6 million in FY2011, \$46.3 million in FY2012, and \$59.7 million in FY2013 (Appendix Table B7). Expenditures increased over the 14-year period by \$29.1 million or by 95 percent.

Total impacts associated with North Dakota State College of Science were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$87.5 million in FY1999, \$100.8 million in FY2004, \$103.6 million in 2006, \$115.5 million in FY2008, \$117.7 million in FY2009, \$131.4 million in FY2011, \$137.8 million in FY2012, and \$170.4 million in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$33.5 million in FY1999 to \$63.1 million in FY2013 or by 88 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$22.6 million in FY1999, \$26.0 million in FY2004, \$27.1 million in FY2006, \$29.5 million in FY2008, \$31.0 million in FY2009, \$33.0 million in FY2011, \$33.0 million in FY2012, and \$39.4 million in FY2013. This represents a \$16.8 million (74.6 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$1.8 million in FY2013 sales and use tax collections, compared to \$1.0 million in FY1999 and \$1.4 million in FY2009. Personal income tax collections were estimated to be \$503,000 in FY1999, \$588,000 in FY2004, \$607,000 in FY2006, \$665,000 in FY2008, \$688,000 in FY2009, \$779,000 in FY2011, \$824,000 in FY2012, and \$947,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from North Dakota State College of Science expenditures would support 383 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 615 positions (excluding student jobs) at North Dakota State College of Science in 2013. In the Fall of 2012, 2,354 full-time equivalent students were enrolled at North Dakota State College of Science.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Wahpeton area were \$22.5 million in FY2013. The total economic contribution was \$55.9 million. Student spending was estimated to generate an additional \$1.2 million sales and use tax revenue and \$204,000 in personal income tax collections. This level of student spending would create enough business activity to support 103 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

**Appendix Table B7. Direct and Total Economic Impacts for North Dakota State College of Science, Selected Fiscal Years 1999 to 2013  
(Current Year Dollars)**

## North Dakota State University

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of North Dakota State University in the Fargo area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by North Dakota State University comprise the direct impacts, or "first round effects". Expenditures by North Dakota State University were \$167.6 million in FY1999, \$246.8 million in FY2004, \$284.7 million in FY2006, \$346.0 million in FY2008, \$355.4 million in FY2009, \$404.3 million in FY2011, \$432.1 million in FY2012, and \$439.1 million in FY2013 (Appendix Table B8). Expenditures increased over the 14-year period by \$271.5 million or by 162 percent.

Total impacts associated with North Dakota State University were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated to be \$490.8 million in FY1999, \$730.6 million in FY2004, \$835.6 million in 2006, \$1.0 billion in FY2008, \$1.04 billion in FY2009, \$1.2 billion in FY2011, \$1.3 billion in FY2012, and \$1.3 billion in FY2013. The sector with the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$194.2 million in FY1999 to \$503.1 million in FY2013 or by 159 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$125.3 million in FY1999, \$171.7 million in FY2004, \$206.4 million in FY2006, \$250.8 million in FY2008, \$255.6 in FY2009, \$287.3 million in FY2011, \$308.5 million in FY2012, and \$321.1 million in FY2013. This represents a \$195.9 million (156.3 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$14.9 million in sales and use tax collections for FY2013, compared to \$5.8 million in FY1999 and \$11.8 million in FY2009. Personal income tax collections were estimated to be \$2.9 million in FY1999, \$4.4 million in FY2004, \$5 million in FY2006, \$5.7 million in FY2008, \$6.1 million in FY2009, \$7.2 million in FY2011, \$7.5 million in FY2012, and \$7.5 million in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from North Dakota State University expenditures would support 3,037 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 3,754 positions (excluding student jobs) employed at North Dakota State University in 2013. In the Fall of 2012, 12,707 full-time equivalent students were enrolled at North Dakota State University.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Fargo area were \$147.5 million in FY2013. The total economic contribution of student spending was \$366.4 million. Student spending was estimated to generate an additional \$7.7 million in sales and use tax revenue and \$1.3 million in personal income tax collections. This level of student spending would create enough business activity to support 668 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## University of North Dakota

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of University of North Dakota in the Grand Forks area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by University of North Dakota comprise the direct impacts, or "first round effects". Expenditures by University of North Dakota were \$225.4 million in FY1999, \$315.1 million in FY2004, \$341.5 million in FY2006, \$370.5 million in FY2008, \$384.1 million in FY2009, \$435.2 million in FY2011, \$467.2 million in FY2012, and \$489.1 million in FY2013 (Appendix Table B9). Expenditures increased over the 14-year period by \$263.7 million or by 117 percent.

Total impacts associated with University of North Dakota were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$657.4 million in FY1999, \$931.1 million in FY2004, \$1.0 billion in 2006, \$1.09 billion in FY2008, \$1.13 billion in FY2009, \$1.3 billion in FY2011, \$1.4 billion in FY2012, and \$1.4 billion in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$255.7 million in FY1999 to \$567.4 million in FY2013 or by 122 percent. Other sectors receiving major contributions included *Retail Trade, Construction, Finance, Insurance, and Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$166.0 million in FY1999, \$225.1 million in FY2004, \$243.8 million in FY2006, \$270.7 million in FY2008, \$278.0 million in FY2009, \$317.7 million in FY2011, \$341.9 million in FY2012, and \$358.6 million in FY2013. This represents a \$192.6 million (116.0 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$16.6 million in FY2013 sales and use tax collections, compared to \$7.7 million in FY1999 and \$12.9 million in FY2009. Personal income tax collections were estimated to be \$3.8 million in FY1999, \$5.5 million in FY2004, \$6 million in FY2006, \$6.4 million in FY2008, \$6.7 million in FY2009, \$7.9 million in FY2011, \$8.2 million in FY2012, and \$8.5 million in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from University of North Dakota expenditures would support 3,387 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 4,190 positions (excluding student jobs) at University of North Dakota in 2013. In the Fall of 2012, 12,729 full-time equivalent students were enrolled at University of North Dakota.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Grand Forks area were \$136.6 million in FY2013. The total economic contribution of student spending was \$339.4 million. Student spending was estimated to generate an additional \$7.1 million in sales and use tax revenue and \$1.2 million in personal income tax collections. This level of student spending would create enough business activity to support about 621 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## Valley City State University

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Valley City State University in the Valley City area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Valley City State University comprise the direct impacts, or "first round effects". Expenditures by Valley City State University were \$13.4 million in FY1999, \$17.0 million in FY2004, \$16.4 million in FY2006, \$18.7 million in FY2008, \$19.2 million in FY2009, \$26.3 million in FY2011, \$28.3 million in FY2012, and \$30.3 million in FY2013 (Appendix Table B10). Expenditures increased over the 14-year period by \$16.9 million or by 127 percent.

Total impacts associated with Valley City State University were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$39.3 million in FY1999, \$50.1 million in FY2004, \$48.8 million in 2006, \$55.7 million in FY2008, \$57.0 million in FY2009, \$77.3 million in FY2011, \$83.0 million in FY 2012, and \$88.3 million in FY2013. The sector that had the largest impact was the *Households Sector* (i.e., personal income of area residents) for each year presented. Personal income increased from \$15.5 million in FY1999 to \$33.6 million in FY2013 or by 117 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$9.5 million in FY1999, \$11.5 million in FY2004, \$11.8 million in FY2006, \$13.0 million in FY2008, \$13.5 million in FY2009, \$17.8 million in FY2011, \$19.3 million in FY2012, and \$19.9 million in FY2013. This represents an \$10.4 million (109.9 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$921,000 in sales and use tax collections in FY2013, compared to \$439,000 in FY1999 and \$624,000 in FY2009. Personal income tax collections were estimated to be \$232,000 in FY1999, \$289,000 in FY2004, \$291,000 in FY2006, \$331,000 in FY2008, \$341,000 in FY2009, \$450,000 in FY2011, \$477,000 in FY2012, and \$504,000 in FY2013 as the result of increased economic activity in the *Households Sector*.

Levels of business activity resulting from Valley City State University expenditures would support 203 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 272 positions (excluding student jobs) at Valley City State University in 2013. In the Fall of 2012, 995 full-time equivalent students were enrolled at Valley City State University.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Valley City area were \$9.9 million in FY2013. The total economic contribution of student spending was \$24.6 million. These levels of business activity would generate an additional \$516,000 in sales and use tax revenue and \$90,000 in personal income tax collections. This level of student spending would create enough business activity to support 43 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

**Appendix Table B10. Direct and Total Economic Impacts for Valley City State University, Selected Fiscal Years 1999 to 2013 (Current Year Dollars)**

## Williston State College

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of Williston State College in the Williston area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by Williston State College comprise the direct impacts, or "first round effects". Expenditures by Williston State College were \$6.1 million in FY1999, \$10.1 million in FY2004, \$9.2 million in FY2006, \$10.9 million in FY2008, \$12.1 million in FY2009, \$22.3 million in FY2011, \$22.8 million in FY2012, and \$20.7 million in FY2013 (Appendix Table B11). Expenditures increased over the 14-year period by \$14.6 million or by 237 percent.

Total impacts associated with Williston State College were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$17.8 million in FY1999, \$29.1 million in FY2004, \$27.2 million in 2006, \$31.3 million in FY2008, \$34.5 million in FY2009, \$64.9 million in FY2011, \$63.2 million in FY2012, and \$59.3 million in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income increased from \$7.2 million in FY1999 to \$22.4 million in FY2013 or by 212 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated at \$4.7 million in FY1999, \$7.3 million in FY2004, \$6.9 million in FY2006, \$8.8 million in FY2008, \$9.0 million in FY2009, \$14.8 million in FY2011, \$15.6 million in FY2012, and \$14.4 million in FY2013. This represents a \$9.7 million (205.0 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$665,000 in sales and use tax collections in FY2013, compared to \$218,000 in FY1999 and \$415,000 in FY2009. Personal income tax collections were estimated to be \$107,000 in FY1999, \$170,000 in FY2004, \$165,000 in FY2006, \$183,000 in FY2008, \$198,000 in FY2009, \$335,000 in FY2011, \$338,000 in FY2012, and \$336,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from Williston State College expenditures would support 136 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 200 positions (excluding student jobs) at Williston State College in 2013. In the Fall of 2012, 537 full-time equivalent students were enrolled at Williston State College.

In addition to the economic contribution resulting from the institution's expenditures, spending by students also contributes to the local economy. Direct impacts of student spending in the Williston area were \$6.4 million in FY2013. The total economic contribution of student spending was \$15.8 million. Student spending was estimated to generate an additional \$332,000 in sales and use tax revenue and \$58,000 in personal income tax collections. This level of student spending would create enough business activity to support 33 secondary (indirect and induced) jobs. A detailed analysis of the economic impact resulting from student expenditures is presented in Appendix Table A20.

## North Dakota University System Office

Each of the state's college campuses is an important component of that area's local economy. This brief analysis will provide highlights of an economic contribution analysis of NDUS Office in the Bismarck area. Key economic indicators estimated in the analysis include direct impacts, total level of economic activity, personal income, retail trade, tax revenues, and employment. All dollar values are presented in terms of current year dollars, i.e., the effects of inflation have not been removed. The Consumer Price Index indicates that inflation during the 14-year period from 1999-2013 was 40 percent.

Expenditures by NDUS Office comprise the direct impacts, or "first round effects". Expenditures by NDUS Office were \$6.1 million in FY1999, \$17.3 million in FY2004, \$6.1 million in FY2006, \$9.4 million in FY2008, \$9.0 million in FY2009, \$32.1 million in FY2011, \$34.3 million in FY2012, and \$47.7 million in FY2013 (Appendix Table B12). Expenditures increased over the 14-year period by \$41.6 million or by 680 percent.

However, it should be noted that the growth in the NDUS office budget since 2009 is the result of changes in accounting practices rather than higher levels of expenditures. CoreTechnology Services (CTS) serves all campuses in the state with computer hardware and personnel housed primarily at North Dakota State University. Prior to 2010, financial support for CTS was included in the respective host campus budget (NDSU), but transferred to the University System office for FY2010. These accounting changes were made to satisfy auditor's requests.

Total impacts associated with NDUS Office were estimated by applying the North Dakota Input-Output Model coefficients to total direct expenditures. Total economic contribution was estimated at \$18.3 million in FY1999, \$53.6 million in FY2004, \$18.7 million in 2006, \$28.8 million in FY2008, \$27.7 million in FY2009, \$96.1 million in FY2011, and \$103.1 million in FY2012, and \$143.3 million in FY2013. The sector that had the largest impact was the *Households* Sector (i.e., personal income of area residents) for each year presented. Personal income has grown from \$7.6 million in FY1999 to \$60.8 million in FY2013 or by 698 percent. Other sectors receiving major contributions included *Retail Trade*, *Construction*, *Finance*, *Insurance*, and *Real Estate*, and *Business and Personal Services*. Increased retail trade activity was estimated to be \$4.2 million in FY1999, \$10.7 million in FY2004, \$4.4 million in FY2006, \$6.8 million in FY2008, \$6.6 million in FY2009, \$21.4 million in FY2011, \$23.2 million in FY2012, and \$31.9 million in FY2013. This represents a \$27.8 million (666.8 percent) increase for the 14-year period. Increased levels of retail trade activity would generate \$1.5 million in sales and use tax collections for FY2013, compared to \$193,000 in FY1999 and \$304,000 in FY2009. Personal income tax collections were estimated to be \$114,000 in FY1999, \$279,000 in FY2004, \$130,000 in FY2006, \$205,000 in FY2008, \$196,000 in FY2009, \$616,000 in FY2011, \$672,000 in FY2012, and \$913,000 in FY2013 as the result of increased economic activity in the *Households* Sector.

Levels of business activity resulting from NDUS Office expenditures would support 354 secondary (indirect and induced) jobs in 2013. These jobs are in addition to the 24 positions at the NDUS Office and the 135 CTS positions attached to the NDUS Office in 2013.
