Zoom Security Features

The following security features are available in your “Schedule a Meeting” window in your Zoom account.

- **Meeting Password**: This provides an additional layer of security, requiring your participants to have access to your meeting link as well as the numerical password.
- **Participant Video**: Turning the participant video off will ensure that participants are unable to use their camera in the connection and potentially distract other participants.
- **Audio**: Audio can be limited to either phone or computer audio if necessary.
- **Mute participants upon entry**: Selecting this feature ensures that no participant joining the meeting will be able to unmute their microphone unless you as the host provide that permission.
- **Enable waiting room**: This feature allows you to see all participants in a waiting area before permitting them into the meeting. The participants cannot see each other and cannot see or hear you until you have moved them into the meeting.

### Meeting Password

<table>
<thead>
<tr>
<th>Meeting Password</th>
<th>Require meeting password</th>
<th>188683</th>
</tr>
