The VPN Client will allow you to connect to the NDSU wireless network. The VPN client provides a secure way to access the NDSU wireless network. If you are using OS 10.4, it is suggested to use the WPA2 capability 10.4 users have as a more secure way to connect to the wireless network.

**Connection Instructions**

1. The VPN Client for the MAC OS will have to be started in order to connect to the NDSU VPN wireless network. To do this, find the client application shortcut stored in the Applications directory on the Macintosh hard drive.

2. Double click VPNClient that is listed in the applications menu.

3. The VPN Client will start and look like this:
5. Click the Connect icon.

6. Enter your Electronic ID (username) and password.
7. Click OK.
8. You are now connected to the NDSU VPN wireless network.

Visit the NDSU Help Desk in IACC 150 or call at 231-8685 if further assistance is required.
