MATH 166 SUMMER 2012 QUIZ 26

- 1. Consider the parametric equations $x = t^4 8t^2$ and $y = t^3 3t$.
 - a) (5 pt) Find $\frac{dy}{dt}$ and $\frac{dx}{dt}$ and determine the critical numbers. b) (5 pt) Find the values of t where x and y decrease and increase.

 - c) (5 pt) Find where the derivative, $\frac{dy}{dx}$ is 0 and where the derivative is undefined. d) (5 pt) Sketch the graph of the curve defined by these parametric equations.

 - e) (5 pt) Find the area enclosed by the loop in this curve.
