

MATH 721
SPRING 2011
HOMEWORK 5

Due Monday April 4, 2011.

1. (5 pt) Let $K \subseteq F$ be fields. We define $\text{Aut}_K(F)$ to be the set of automorphisms $\sigma : F \rightarrow F$ such that $\sigma(k) = k$ for all $k \in K$. This is called the *Galois group* of F over K . Show that if $[F : K] = n$ then $|\text{Aut}_K(F)|$ divides n . What happens when n is prime?
2. (5 pt) Show that if $K \subseteq F$ and $u \in F$ is algebraic over K of odd degree, then $K(u^2) = K(u)$. What can you say if u is transcendental over K ?
3. (5 pt) Let F be a finite field of characteristic p . Show that $\text{Aut}_{\mathbb{Z}_p}(F)$ is cyclic.
4. (5 pt) Let $K \subseteq F$ be fields and let $\overline{K}_F = \{z \in F \mid z \text{ is algebraic over } K\}$. Show that \overline{K}_F is a subfield of F containing K (this is called the algebraic closure of K in F).
