**Notes on the 5-week schedule:**

- This schedule has Test 4 taking place about a week after my “live” Chem 342-Face-to-Face section starts on Tuesday, June 13. The first test there isn’t till June 28, so this would allow completion of Organic I with time to then prepare for the first test in Organic II, after which you’d then be right on pace with Organic II.
- On this schedule you might routinely be going through three lecture videos (hour-long) per day, plus reviewing them and doing Sapling homework. You may also need to be using some weekend time, perhaps including Memorial Day weekend time.
- The lecture videos will be available as of Feb 14. So you could start early if you wished.
- You could start using this schedule, but if necessary you could slow it down if you found yourself falling behind.
