

Outline

- Intro
 - Life is a crazy, busy, adventure that sometimes never seems to stop. The daily tasks of waking up and going to work, providing for your family, checking off your to do list, and all the other tasks that pop up in our lives, leave us with a need for some time to relax and reset. For some this can be watching a movie, playing a game, going for a drink or... taking a simple walk through one of the greatest gifts God has ever given us. Nature. Land and water. The beautiful world of plants and animals.
 - Through the expansion of our population, the possibility to look out your window and see a nature-filled environment isn't always an option. Thankfully places like the Dickinson research and extension center, offer us the opportunity to truly see our living world. With beautiful walkthrough areas peppered with numerous plant and animal species, the Dickinson REC is a one-of-a-kind facility that with the help of the horticulturist position being filled, will increase the education for people, build our community, and offer a safe eye-catching environment for all ages.
- Education
 - History 1905 established
 - Education for the common people
 - Living classroom
