# COVID in Kids

## COVID CAN BE SERIOUS FOR INFANTS AND YOUNG CHILDREN.

While kids are at lower risk of severe illness from COVID than adults, it is nearly impossible to predict who will experience severe outcomes.

Since 2020, COVID has led to more childhood deaths than either flu or pneumonia.

COVID vaccination continues to protect children against severe disease and hospitalization from COVID.

**ALL CHILDREN 6 MONTHS AND  
OLDER SHOULD STAY UP TO  
DATE ON COVID VACCINATION  
FOR THE BEST PROTECTION.**

## THE COVID SHOT

Everyone ages 6 months and older should receive an updated COVID vaccine to protect against the potentially serious outcomes of COVID this fall and winter whether or not they have ever previously been vaccinated.

## BENEFITS

Keeping a child up to date on COVID vaccination reduces the chance of a COVID infection and the need to miss school, daycare, extracurricular activities or other important events from COVID.

## SAFETY

COVID vaccines are safe and effective in kids. Hundreds of millions of people in the U.S. received COVID vaccines under the most intense safety monitoring in our history.
